

Please read this first

1. Editing Colors & Fonts (via LESS):

This template is an advanced HTML5 template powered by some modern features such as CSS3, LESS and AJAX to render the styles, colors, fonts and some additional visual enhancements. LESS and AJAX will work only from server side, means you have to upload all files to a real web hosting server in order to view proper colours and fonts rendering of this template.

Instead if you just test them from your local computer you will not be able to see proper colours or fonts, but this is not any error. So please upload the template to a web server and edit it there and check the preview from there. Everything will work properly then, we have tested it and 100% OK.

For more info about working with LESS, please refer to PDF user guide provided within this download pack.

2. Replacing Placeholder Images:

In the PDF user-guide, we have described each and every step of replacing placeholder images with your own. Still, If you find it difficult to setup the images in your website, please [click here to download](#) **the pack of original images (heavily blurred version)** used in live preview of our template.

You can easily replace those images with your own. We will send it to you if you just send a support ticket requesting images, send the ticket via <http://designova.net/support.html>
