In order to download the current version, please visit wordpress.org (<http://wordpress.org/>). Please check WordPress Codex (http://codex.wordpress.org/Installing_WordPress) for information on how to install WordPress on your server.

Once WordPress is successfully installed, you will have to upload the theme to your WordPress directory. Download and un-zip the *Ball-package* folder. You will find 4 folders and one of them 01_Theme. There are two zipped theme folders *01_ball_v1.0.0.zip* and *02_ball-Child-Theme.zip*. If you want to use a child theme, will have to install two themes.

Open your WordPress dashboard. Go to Appearance > Themes. Click the **Add New Theme** button, then **Upload Theme** and select the 01_ball_v1.0.0.zip file. Click Install Now.
