

Child theme

Unless you are absolutely sure that you will never ever need to modify any of the theme files you should install and activate a child theme for OLA.

For your convenience Ola comes with a ready to use child theme. You'll find the "OLA child" in Appearance->Theme if you have already installed it or install `ola-child-theme.zip` file. Its files structure is as in the image below.

If you want to modify the theme css, you'll have to edit the *style.css* file.
