Setting

The general theme section allows you to control the behaviour and the overall appearance of your theme.

To configure this part go to Start Hub->Settings.
Styles

The style section contains the customizer.

Click [Customizer] to create your own style for the whole site or individual pages. You can pick colors, modify sizes and much more with a real time theme preview. Choose the style to be loaded in the layout options.

Click **Copy** and enter a new name to duplicate the style. Then you choose your new style from the list and can make adjustments.

To get more capabilities use "Advanced Model". After all the changes, click Save.

Development

Setting	Description
Compile LESS in the browser on every page load	Check the first option and the browser automatically compiles your LESS files via JavaScript every time you load a page. This provides an appropriate testing environment. I It's not recommended to enable developer mode on the live site as the constant process of compiling is highly inefficient.
Allow styles to be loaded by URL. This will override the style originally loaded by the theme.	The option enables the browser to load styles by URL. This is useful, if you want to test different styles for your website. Disable this option, when your website goes live.

To finish your LESS modifications, hit the **Compile LESS** button and all your changes will be compiled into the final CSS.

Make sure, you aren't developing in the /styles/STYLE-NAME/css folders, because these folders will be overridden as soon as you hit the **Compile LESS** button.

Error page

While you work hard to make sure that every link actually goes to a specific web page on your site, there is always a chance that a link clicked will slam dunk and become a famous 404 ERROR PAGE NOT FOUND.

Default ▾ Select error page.

Maintenance mode

When you first install the theme you can to hide the front-end from visitors while you set things up for the final launch.

Logged in administrator gets full access to the site, while regular visitors will\won't be redirected to the page chosen below.

☑ Enable/disable maintenance mode.
