To set a custom permalink structure for portfolio posts, navigate to `ThemeSquared` → `ThemeOptions` → `Portfolio Tab` and enter your custom slug in the "Portfolio Slug" field.

Refresh Permalinks

Once you insert the custom slug, go to `Settings` → `Permalinks` and select the "**Post name**" and hit Save Changes.

Caution: Just make sure its not the same name as your portfolio. So if your portfolio page is called "portfolio", your slug could be "portfolio-items" or "products".
