Theme Installation

File Structure

Extract (Unzip) the plugin download package. Within the download package you'll find the following file structure and contents:

knowledgepress_package/

- knowledgepress/ (theme folder for FTP install)
- knowledgepress.zip (theme zip file for WP install)
- KnowledgePressManual.pdf (PDF documentation)
- AccordionFAQManual.pdf (FAQ PDF documentation)
- import/ (demo content import XML file)
- knowledgepress-child.zip (child theme template)

WordPress Installation

1. Go to **Appearance > Themes > Add New**.
2. Click **Upload Theme**, locate knowledgepress.zip in your plugin download package and click **Open** and **Install Now**.
3. Once the theme is uploaded, you need to activate it. Go to **Appearance > Themes** and activate the theme.

FTP Installation

1. Using a FTP program, upload the theme folder knowledgepress located in your plugin download package folder.
2. Once the theme is uploaded, you need to activate it. Go to **Appearance > Themes** and activate the theme.

Installing Plugins

This theme requires the following plugin:

- **Redux Framework**

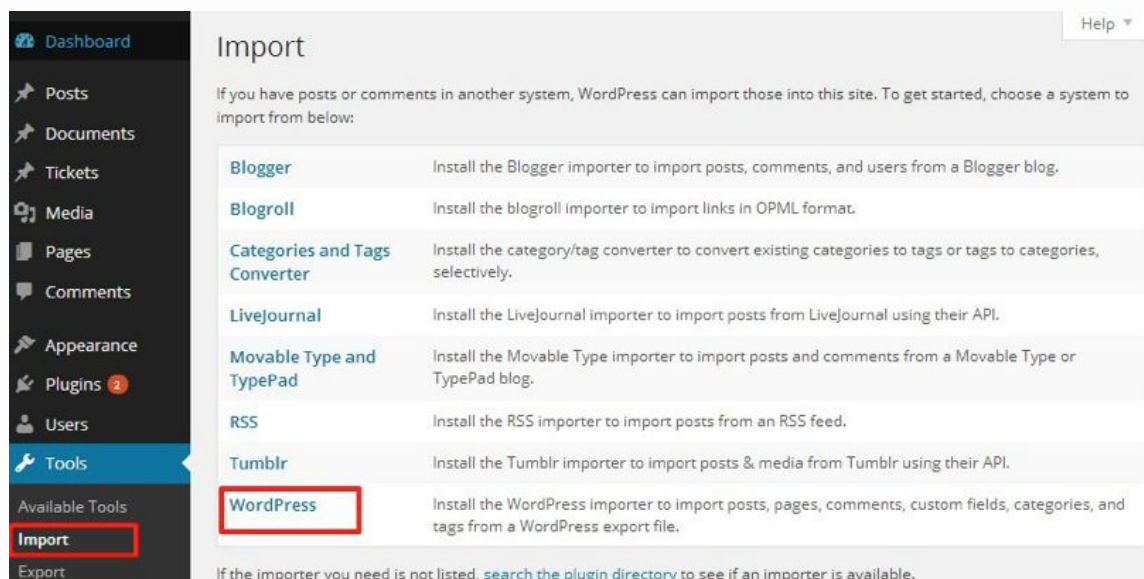

Bundled are also optional plugins:

- Visual Composer
- Accordion FAQ

Once you have installed the theme you should see notification to install required plugins in dashboard. Click on the **“Begin installing plugin”** link to begin the installation. Once you install the plugins, please return to the plugin list, and activate them. That’s it, you should be good to go.

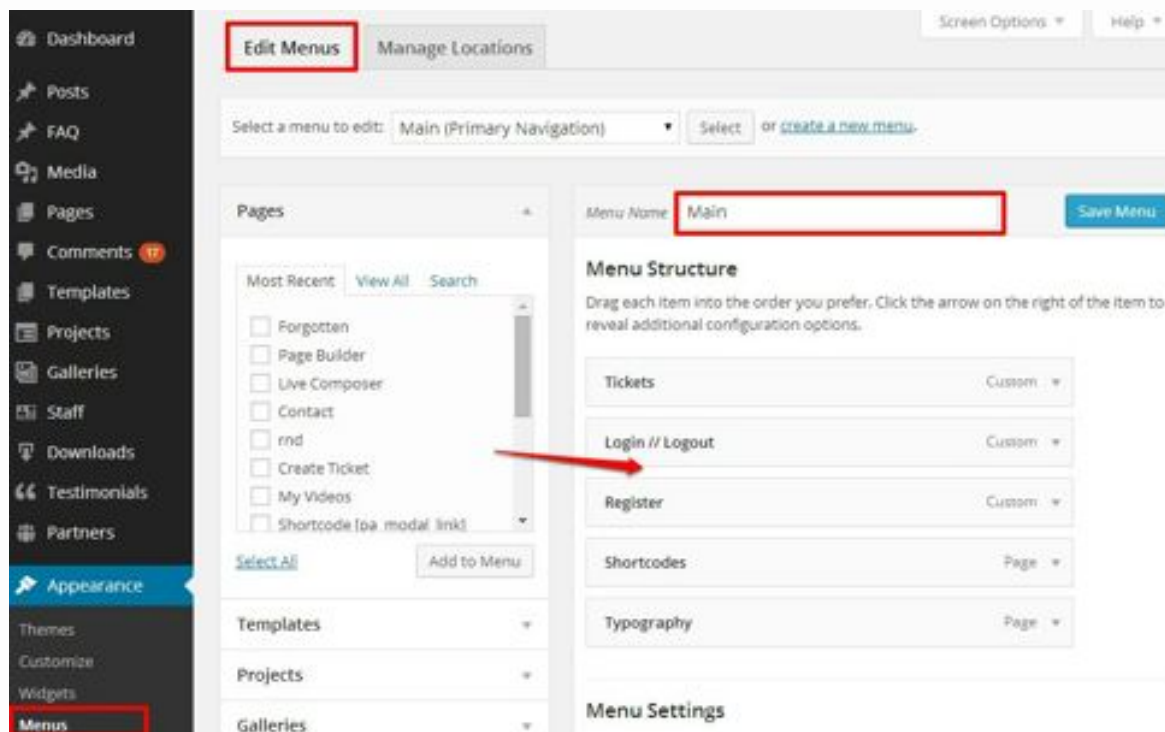

Importing Demo Content

You can import demo content using XML file (optional). To import demo content, navigate to **Tools > Import > WordPress > Choose File** select XML file located in theme download package under import folder. Proceed with uploading the file and selecting author and content options.

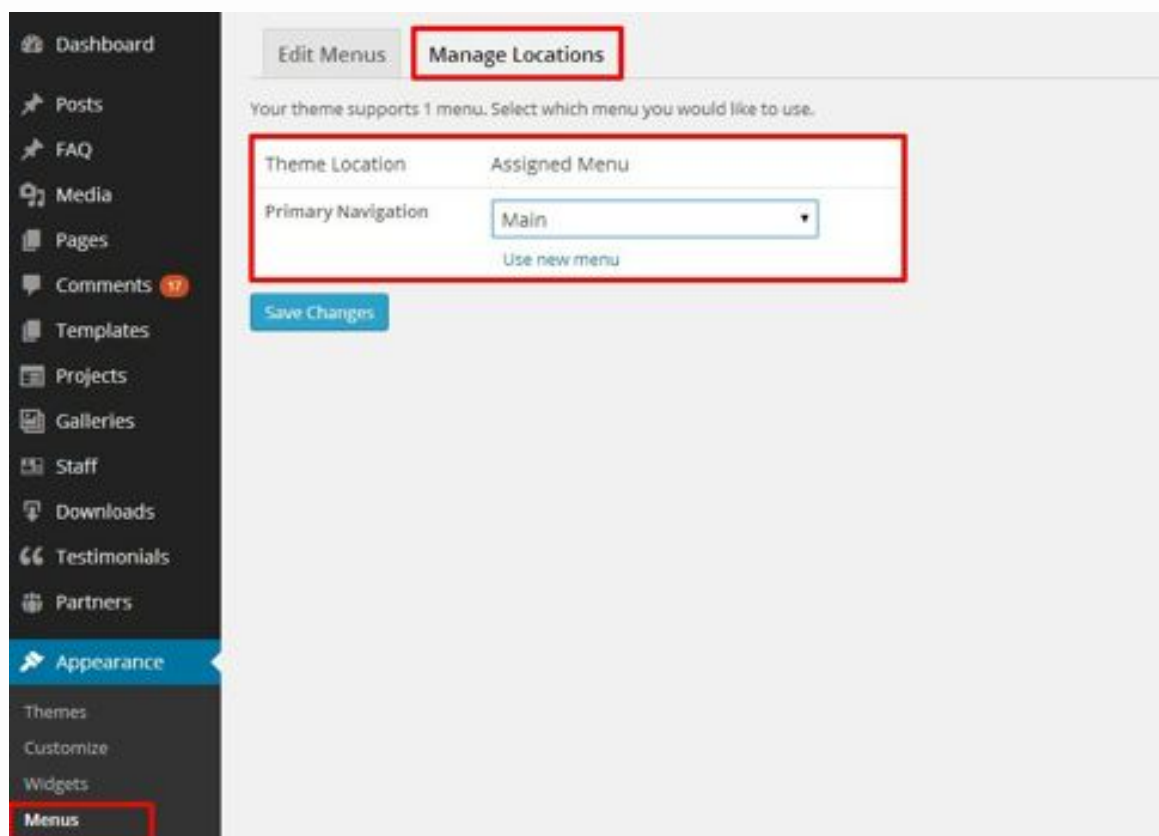

Setting Up Menus

To setup your menus, navigate to **Appearance > Menus**. Give your menu a name and add a variety of items including pages, categories and custom links. You can manage your menus using the drag and drop functionality and click the "Save Menu" button.

After setting up your menu, select Manage Locations tab and select your menu under Assigned Menu and click the "Save Changes" button.

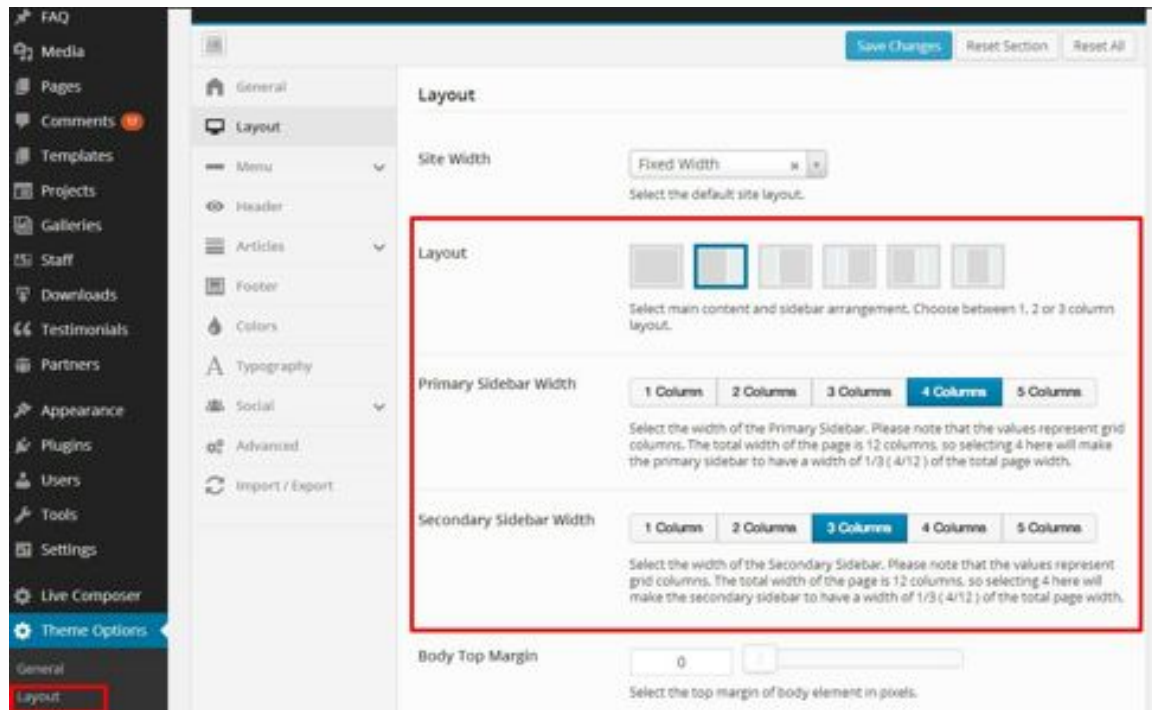

Theme has two menus locations:

- Primary Navigation (Top navigation displayed on desktops)
- Sidebar Navigation (Sidebar navigation is primarily a mobile navigation that can be also visible on desktops)

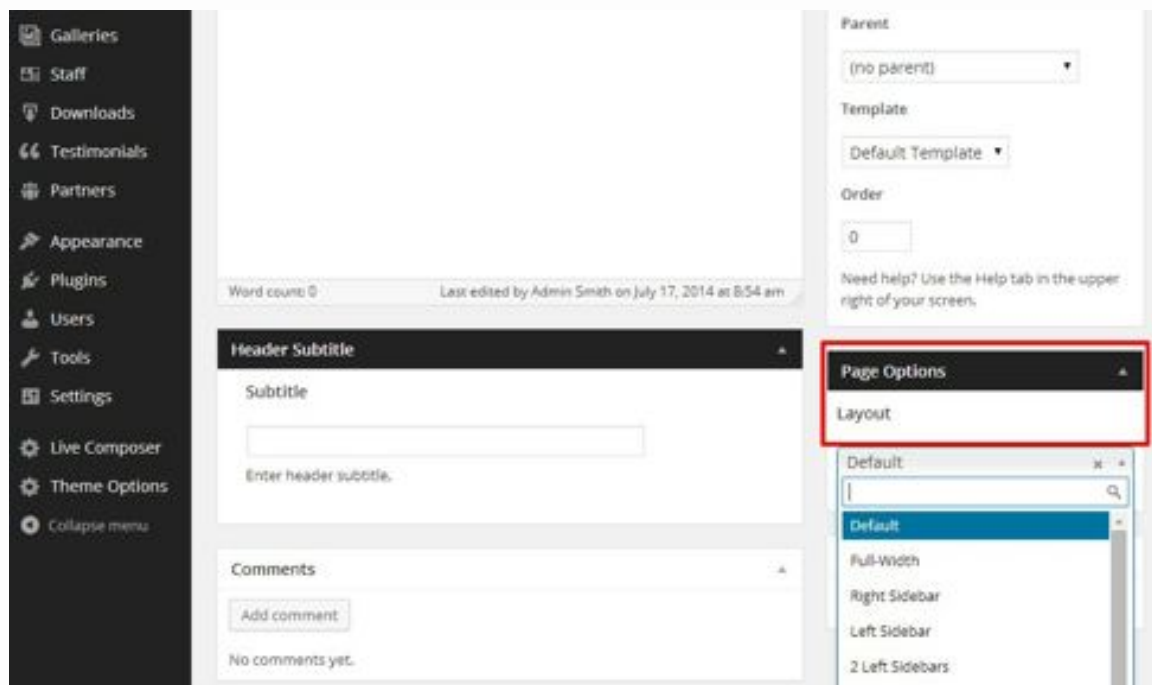

Widgets Areas

Global Sidebars are **Header** and **Footer**.

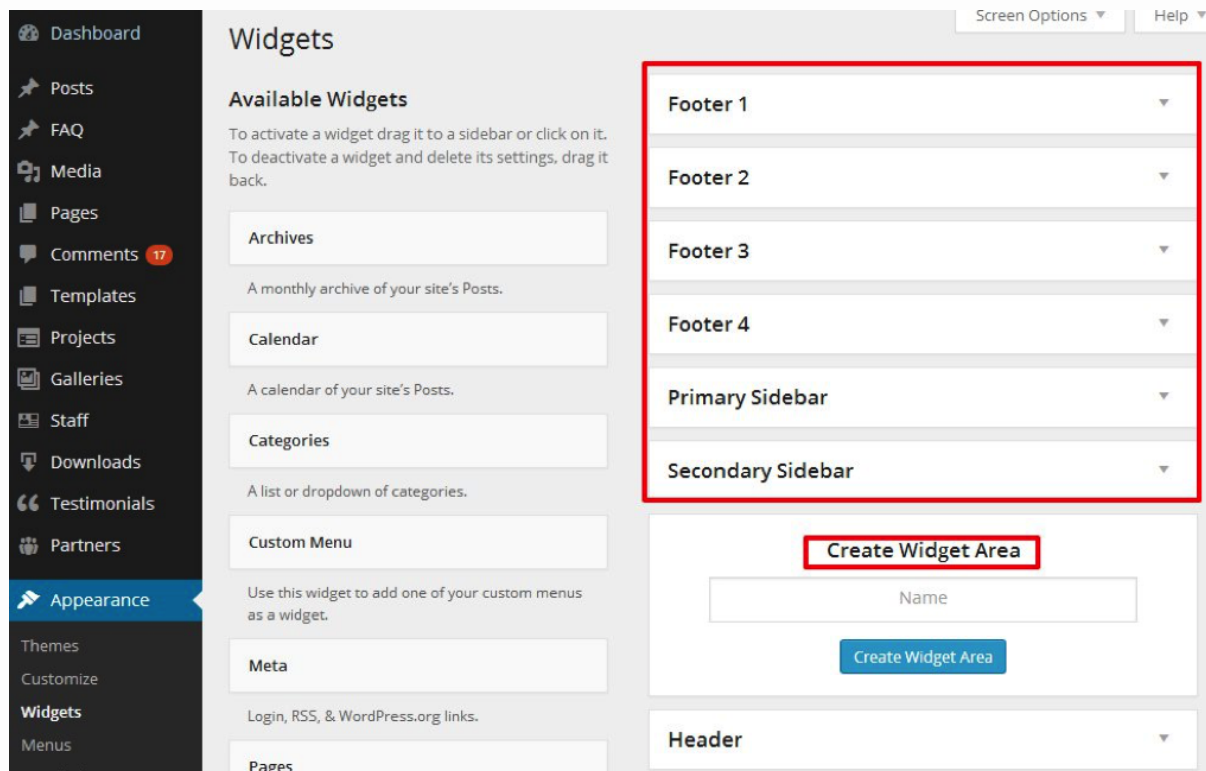

Global sidebars are set under **Theme Options > Layout**. In Layout section select main content and sidebar arrangement and also select the width of the Primary and Secondary Sidebar.

Primary and Secondary Sidebars can be overridden on individual pages under page options metabox.

Header sidebar is global sidebar visible on all pages in header under page title. Theme has the ability to create an unlimited custom sidebars and assign them to pages in header, primary and secondary locations.

Custom Theme Widgets

Recent Posts Widget

Recent Posts widget allowing increased customization to display recent posts from multiple categories.

Popular By Comments Widget

This widget displays articles ordered by the most comments.

Popular By Votes Widget

This widget displays articles ordered by the most liked votes.

Popular By Views Widget

This widget displays articles ordered by the highest number of views they received.

Twitter Widget

Twitter widget will enable you to add recent tweets from your twitter account to a widgetized area. You can customize the number of tweets and the follow me from the widget settings. The widget now requires Twitter Application "Consumer Key" and "Consumer Secret". Create your Twitter application here: <https://dev.twitter.com/apps>

Page Header

Headers are set globally under **Theme Options > Header**. Headers can be overridden on individual pages under page options metabox. Video background accepts only self hosted (uploaded) videos.

Setting Up Pages

Knowledge Base Page

To set up Knowledge Base page go to **Pages > Add New**. Enter title and then under the **Page Attributes** metabox set **Template** to **Knowledge Base** and click Publish button to save.

After the page is saved additional metabox Knowledge Base Options will be revealed. There you can specify and select categories to display on Knowledge Base page template, select number of knowledge base columns displayed on page, select number of knowledge base articles displayed per category and select display 3rd level child categories.

Contact Page

To set up Contact page go to **Pages > Add New**. Enter title, content and then under the **Page Attributes** metabox set **Template** to **Contact** and click Publish button to save.

After the page is saved additional metabox will be revealed where you can specify alternative email address and subject. The form uses by default WP admin email or you can specify alternate email address and subject under Contact form options metabox.

Visual Composer

Visual Composer page builder can be used on any page template but for full browser width backgrounds set page template to **Visual Composer**. To set up Visual Composer page go to **Pages > Add New**. Enter title, content and then under the **Page Attributes** metabox set **Template** to **Visual Composer** and click Publish button to save.

If **Visual Composer** page template is selected **Page Options** metabox settings are not applicable.

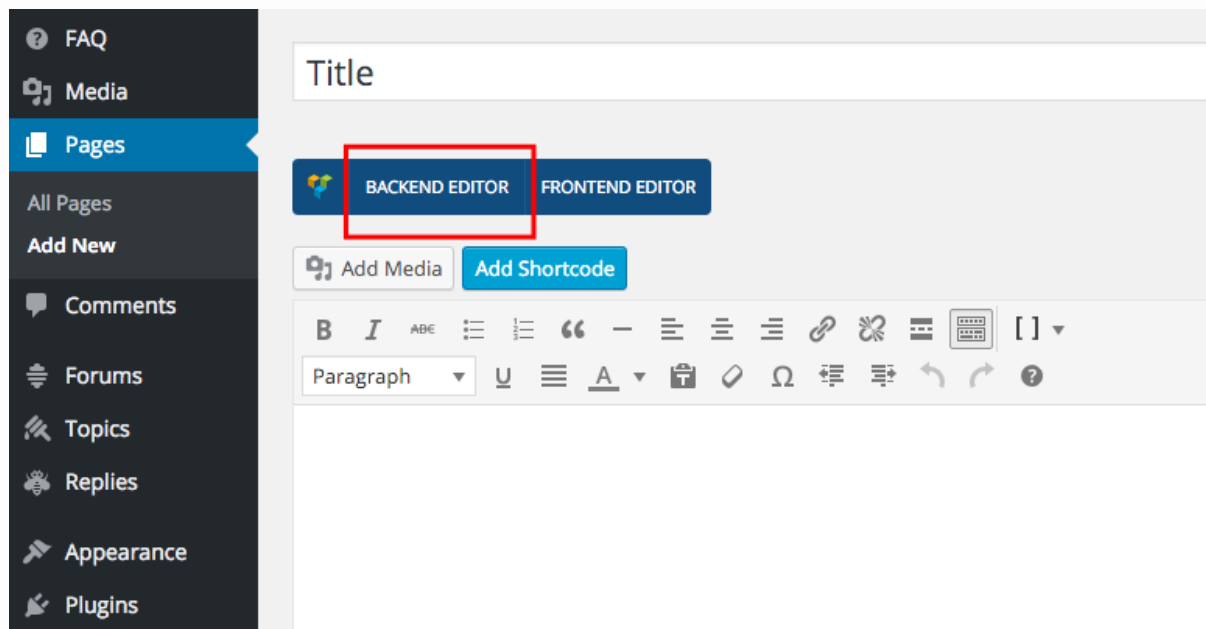

Page Builder: Visual Composer

Frontend Drag and drop page builder.

To install this plugin:

- Navigate to **Appearance > Install Plugins** under **WPBakery Visual Composer** click to Install button.
- After installing plugin click to **Activate**.

To build a page, create a page and click **Backend Editor**

Full Visual Composer Manual is located here:

<https://wpbakery.atlassian.net/wiki/display/VC/Getting+Started>

Post Formats

The theme supports the use of different post formats in order to change the appearance of your content. If you are familiar to tumblr, the concept is similar.

Theme supports "Standard", "Link", "Image", "Video" and "Audio" post formats.

Standard Post Format

Standard post displays title and post content on articles or search page. Go to **Post >Add New**, enter post title, enter post content, under "**Format**" metabox select "**Standard**" and "**Publish**".

Link Post Format

A link to another site. Go to **Post >Add New**, enter post title, under "Format" metabox select "**Link**" and "**Publish**".

Image Post Format

Image post displays title, featured image and post content on articles or search page. Go to **Post >Add New**, enter post title, under "**Format**" metabox select "**Image**", under "**Featured Image**" metabox upload your image and "**Publish**".

Video Post Format

Video post displays title, YouTube or Vimeo video and post content on articles or search page. Go to **Post >Add New**, enter post title, under "**Format**" metabox select "**Video**". This will reveal "**Video Post Settings**" metabox, enter YouTube or Vimeo embed code and "**Publish**".

Audio Post Format

An audio file. Could be used for Podcasting. Go to **Post >Add New**, enter post title, under "**Format**" metabox select "**Audio**" and "**Publish**".

Analytics

Track article views, votes and search term. Analytics charts are available under **Analytics** menu in dashboard.

Article Views

Article view analytics track number of views (page loads) an article single page receives, this is always enabled.. Reset view count under **KnowledgePress > Articles** tab.

Votes

Votes settings are located under **KnowledgePress > Voting** tab, this is also where all votes across all articles can be reset. Resetting a single article can be done under Post Options metabox on post edit page.

Search Terms

Search tracking settings are located under **KnowledgePress > Search** tab, this is also where all search terms can be reset.

Automatic Article Table Of Contents

Activate the feature on per article base on post edit page under **Post Options** metabox:

When enabled, automatic table of contents will be generated on front end from H1, H2, H3 tags.

FAQ Posts

Faqs are bundled as external plugin, to install FAQ plugin navigate to **Appearance > Install Plugins**. Click Install and Activate Plugin.

Faq plugin manual is located in download package folder.

bbPress Forum

Our theme provides custom styling for bbPress forum plugin.

To install this plugin navigate to **Appearance > Install Plugins** under bbPress click to Install button and activate it.

For bbPress documentation see plugin websites:

<http://bbpress.org>

<https://wordpress.org/plugins/bbpress>

Child Theme

Child Theme allows you to modify or add to the functionality of the parent KnowledgePress Theme without directly modifying the theme files.

Child Theme template is located in the download package.

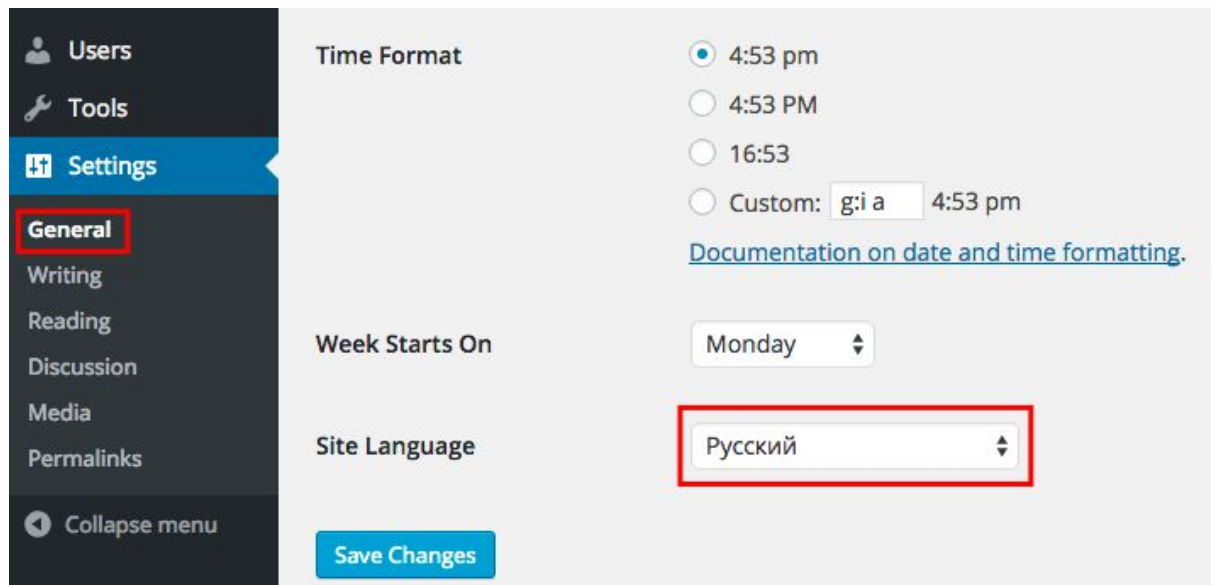

Translation

Translating Theme

1. Download and install Poedit.
2. Open the program after the installation. Click **File > Open** and find the original `knowledgepress.pot` file located in the `lang` directory in theme root.
3. Translate all the words to your language and save your translated file in the same ("lang") directory with name of your language and country codes.
4. If your language is russian and the country is Russia, then you must save the file like this: `ru_RU.po`. First parameter is a language code, second parameter is a country code. All codes can be found here:

http://www.gnu.org/software/gettext/manual/html_chapter/gettext_16.html

5. Set site language under **Settings > General**:

Support

Support is only provided through external support system at <http://pressapps.co/help/>

If you have a pre-sale question feel free to use the item comments section on Envato.

Before contacting support please:

- Read this documentation
- Perform basic troubleshooting by disabling plugins and switching to default theme to identify possible cause
- Describe your problem in detail
- Include links
- Attach screenshot
- Include your WP and FTP login where appropriate
