

# Inbound – One Page Sites

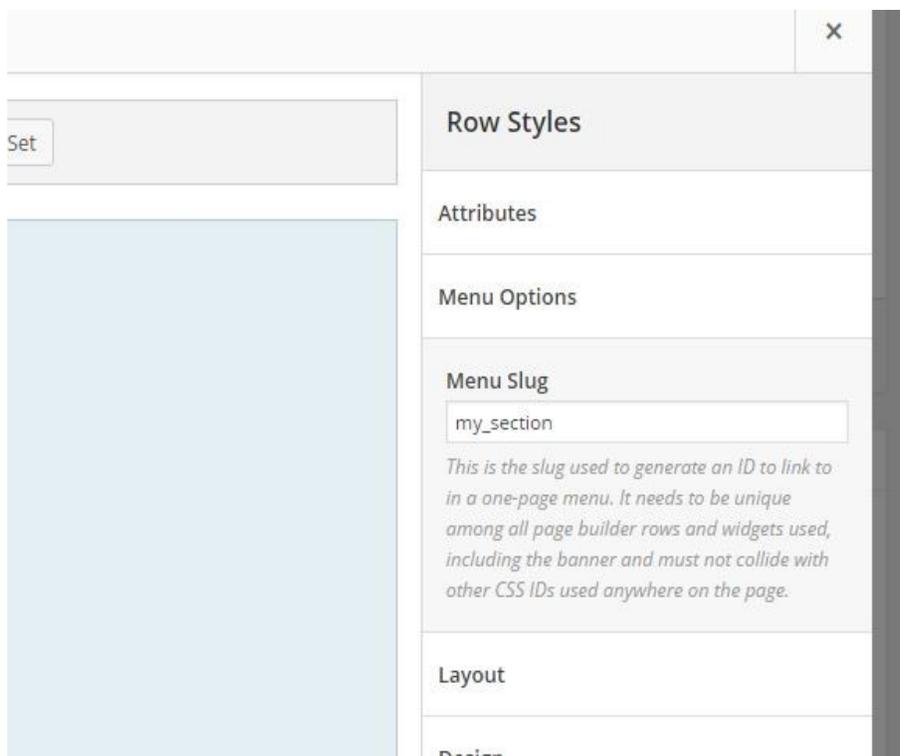

Inbound offers *basic* support for one-page sites.

We have added initial support for one-page sites, enabling you to set up sections on your site that menu items can point to. When visitors click on one of those menu items, the page scrolls smoothly to the targeted section.

## 1. Create sections that a menu item can point to

Switch to the page editor. Edit a row or widget and click on the “Menu Options” accordion item to unfold it. Under “Menu Slug” you can define a unique CSS ID to be assigned to that row or widget.

Note down that ID as this is what you will use to identify this section later in order to instruct the menu item to link to that section.

## 2. Link to page sections for which anchor points exists

### 2.1. Create a menu that points to anchors

Simply create a menu like you are used to, but use the “Custom Link” items. Under “URL” enter “#” followed by the ID you selected earlier, e.g. #my\_section.

Menu 1	Custom Link ▲
URL	
<input type="text" value="#my_section"/>	
Navigation Label	
<input type="text" value="Menu 1"/>	
Title Attribute	
<input type="text"/>	
<a href="#">Move Up one</a> <a href="#">Down one</a> <a href="#">Under Home</a> <a href="#">To the top</a>	
<a href="#">Remove</a>   <a href="#">Cancel</a>	

Other	Custom Link ▼
-------	---------------

### 2.2. Link widgets to anchors

You can also link to these sections from most of the theme's widgets if they support links. As the URL simply enter “#” followed by the ID you selected earlier, e.g. #my\_section.

Icon Position:

Left of caption ▼

Select where you would like the icon to be displayed.

Left Button Link URL:

Define a link to point this button to.

Open Link in New Window

Add "nofollow" attribute to link.
