

HELLO

Texts Corrections

1) Opening the folder "Edit Comp", next opening folder "Texts" . Next,as an example, I'm opening folder "Titles 1". There is the text belonging to the first scene there. And further opening compositions with text "text 1" and "text 2". Pulling the scroll bar on the panel time line till our text appears. Double click on it and typing what we need. Edges which can not be crossed are marked with blue lines. On the same principle changing all our text.

2)Color Adjustment ;opening the folder "Edit Comp", next opening folder "Color",double click to composition "Color Control " Let's go to "Color Control" and adjust the main controllers . Clicking on the " Color Control " and going to inset "Effect Controls". If you don't see this panel click Window and put the checkmark on "Effect Controls". Let's start the adjusting.

2)Render:Now let's save our project. Going to inset Project,clicking the «Final Composition» ,going to menu Composition and clicking Add to render quewe. In the inset lossless selecting the video format and adjusting all other needed settings. Clicking Render and waiting for Rendering completion.

Thank you. Have a nice day!
