3. How to Place Text and Images
4. How to do Tagline adjustments
5. How to add music
6. How to render

1. How to import and Place your logo

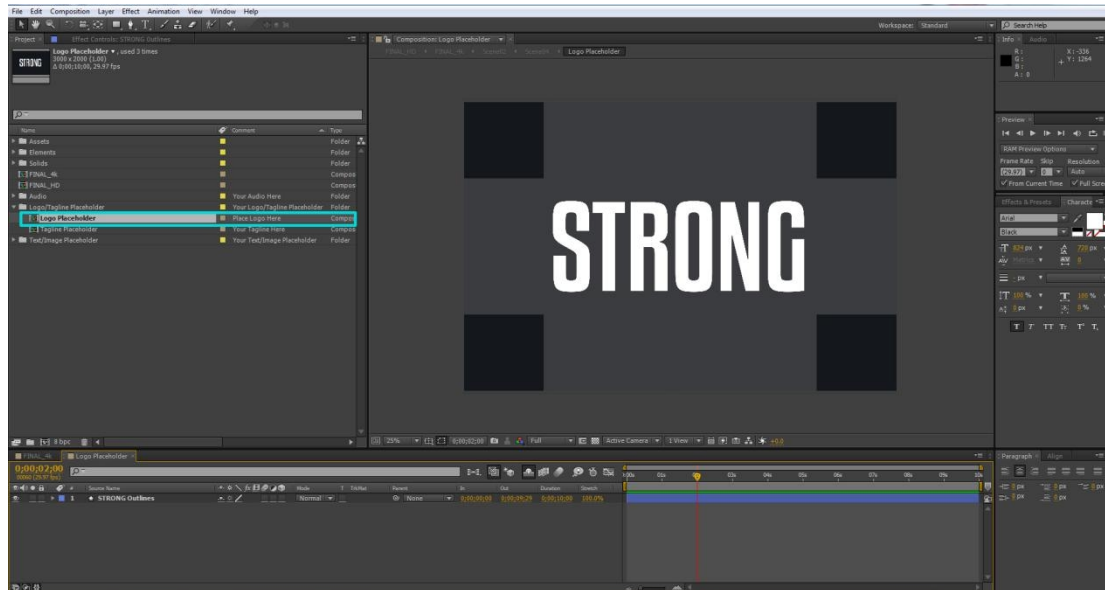

Step1.

Inside project panel Right click on an empty space then click import>file. Then select a logo with alpha channel(transparency)

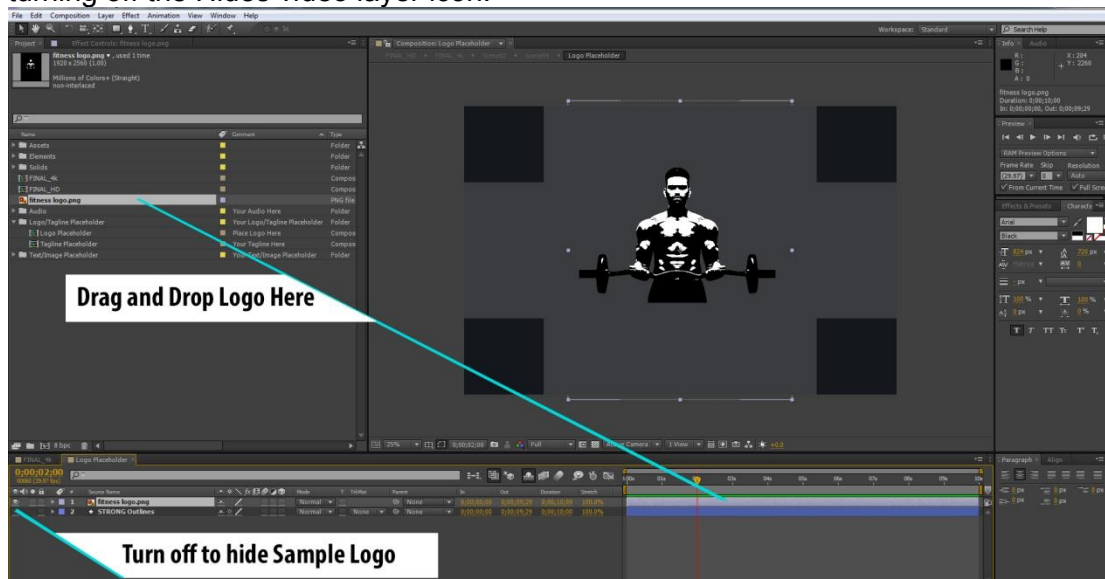

Step2.

Open the folder named Logo/Tagline Placeholder. Double click on Logo Placeholder Composition to open it in timeline.

Step3.

Drag and drop your logo on top of the sample logo layer. Hide the sample logo by turning off the Hides video layer icon.

2.How to change Tagline

Step1.

Inside Logo/Tagline placeholder folder double click to open Tagline Placeholder.

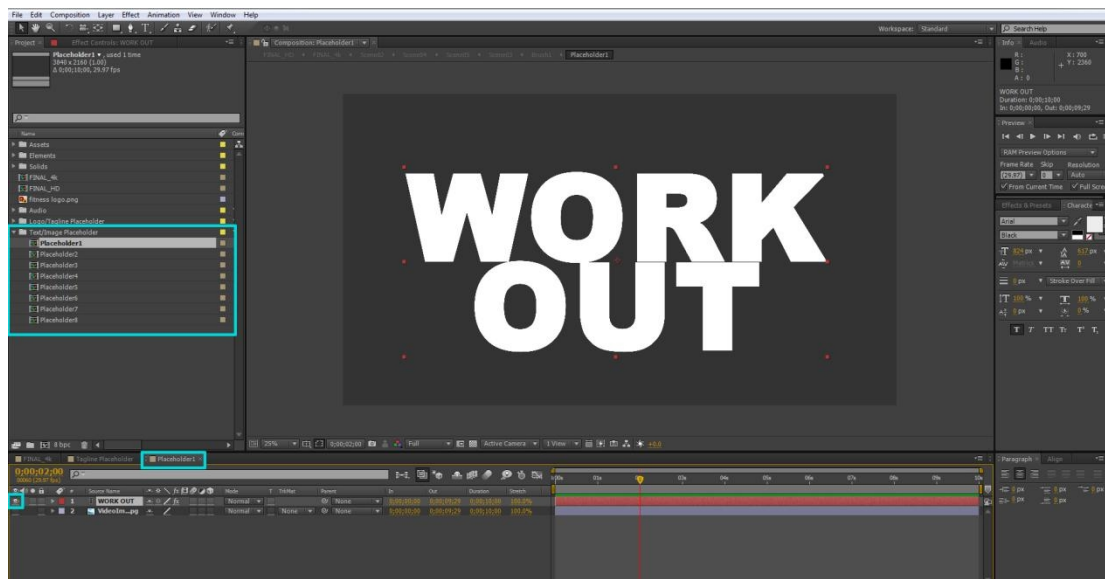

Step2.

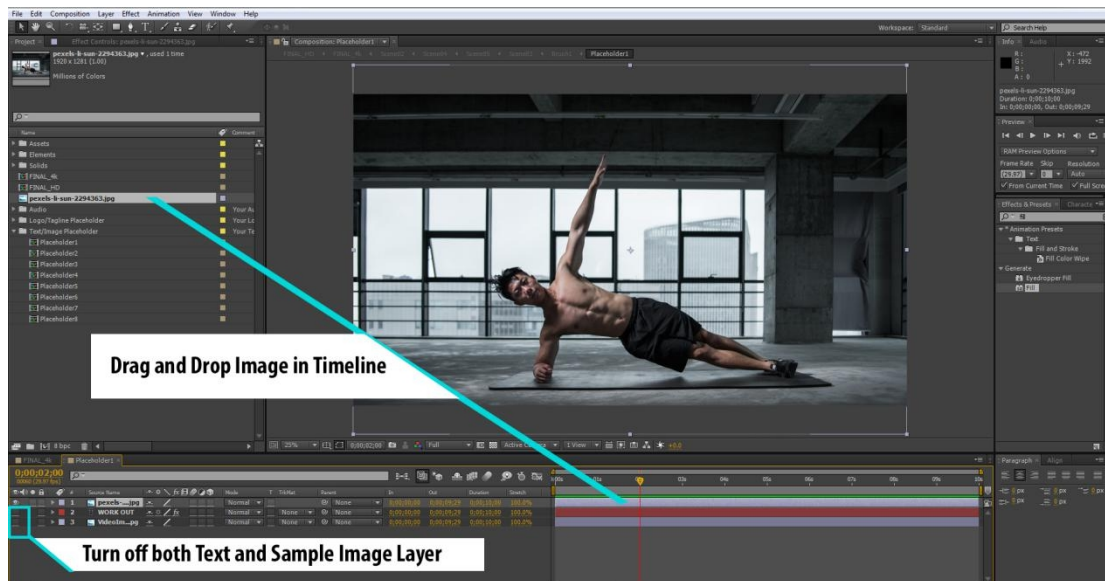

Double click on Tagline layer (THE POWER WITHIN) to select and type your tagline there.

3.How to Place Text and Images

Open the folder named Text/Image Placeholders.Double click to open the Placeholder Compositions. To Edit text double click on text layer and Type.

To Place an image first import an image or video and place it in timeline.Hide both Text and Sample Image Layer.

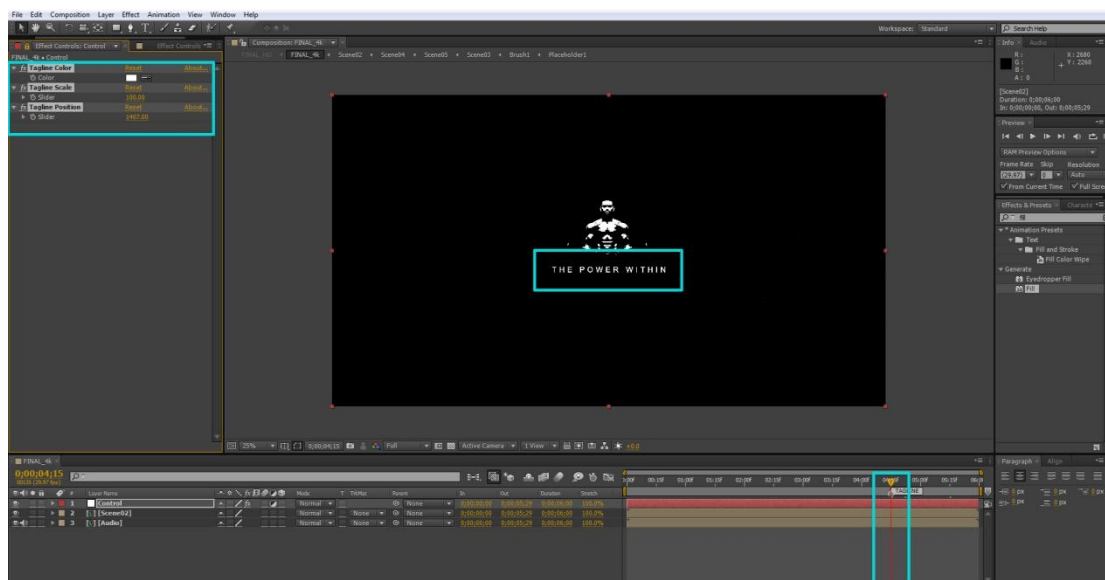

4.How to do Tagline adjustments

Access the Final Composition already opened in timeline. If it is closed, double click Final 4K (RENDER ME) Composition in project panel to open in timeline.

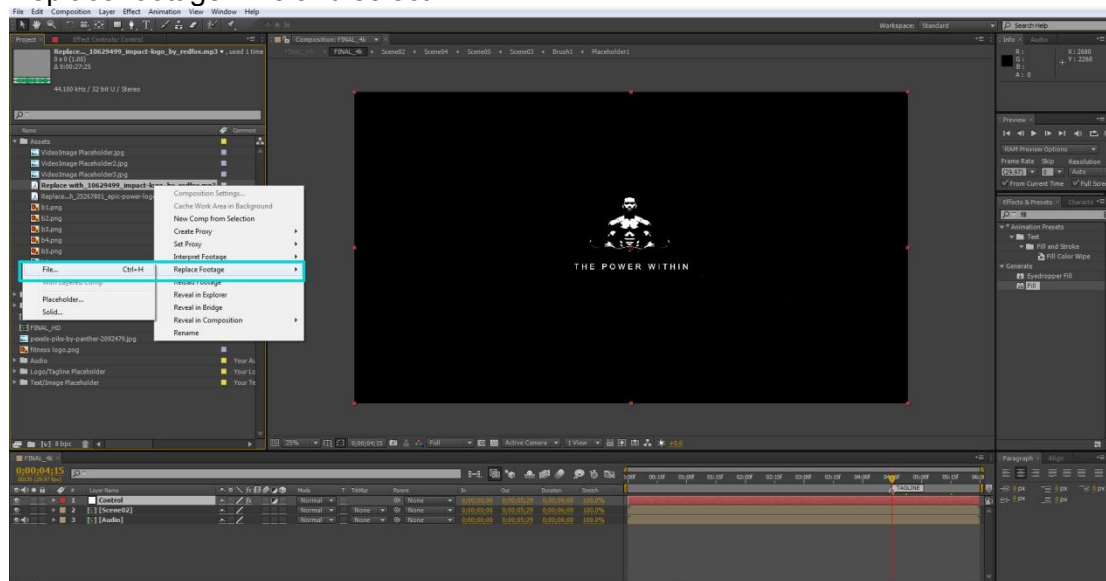

Select the layer named “CONTROL” and open effects controls panel (you can hit “f3” to open it).

Move the timeline indicator to ‘TAGLINE’ marker and Change the tagline position,size and color in Effects controls.

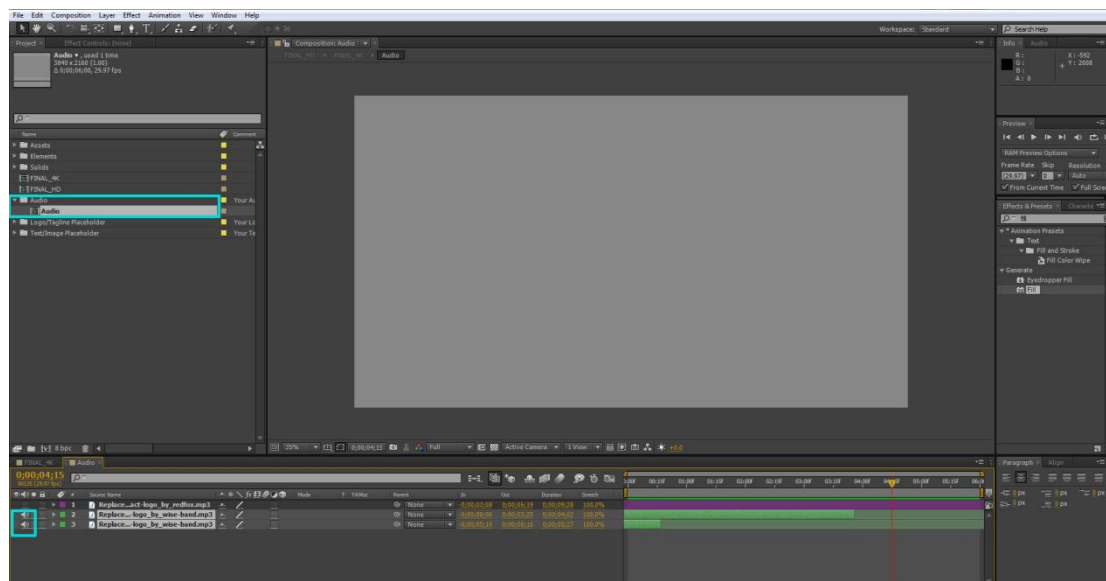

5.How to add music

In project panel open folder Assets. Right click on the music you purchased then **Replace footage>File** and select .

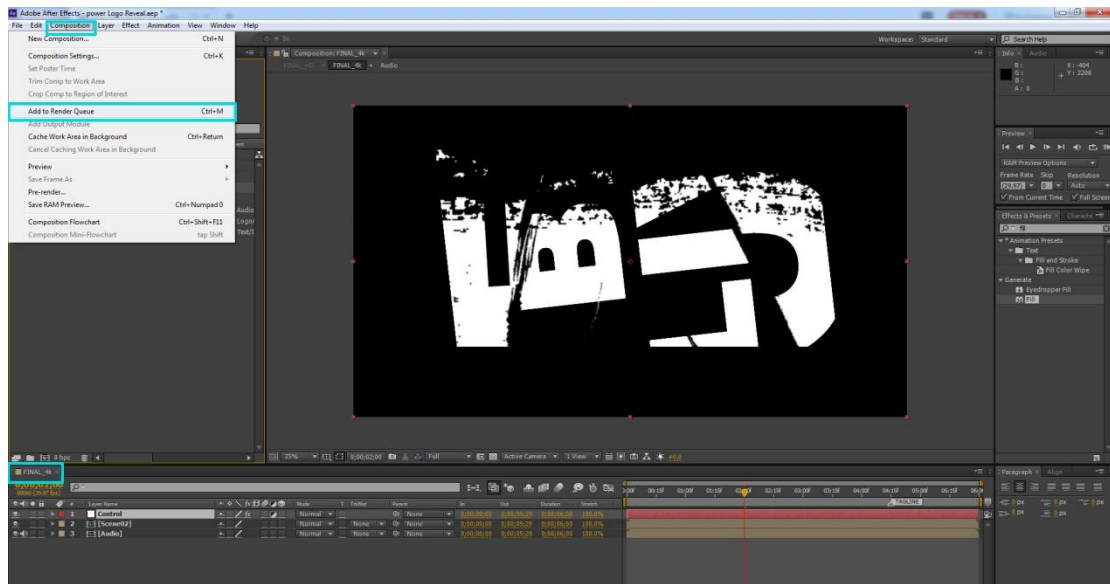

Open the Folder Audio and double click on Audio Composition to open . Turn on the specific Music layer in timeline.

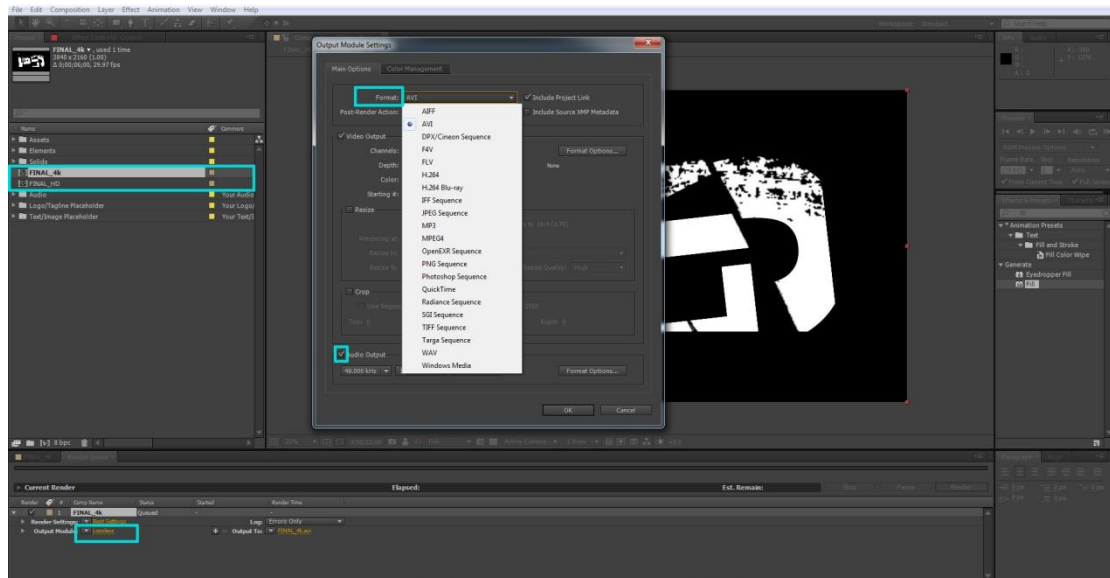

6.How to render

Open the FINAL_4K composition or if you are already in it, go to the composition menu and click 'add to render queue' or press 'ctrl+M' on a pc or 'cmd+m' on a mac. If you like to render HD(1920x1080) , after all the customization done in CONTROL(FINAL_4k composition) double click on FINAL_HD composition.

In the render queue panel that appears click on 'lossless' in the Output module to adjust the settings like selecting an output format. Also check box the Audio output, to enable sound in the final render. Then click okay and render.
