Here are a few instructions that will help:

    1.   **Open the "Edit" folder**. Here you can add photo, video and audio files for your project. Drag your picture into the comp, then resize it
   It also allows you to change all text composition
There are parameters in "Control" effects panel. You can edit them.
    2.   Select "Control" to change parameters.
   You can edit all parameters in "Control" easily.

Example:

To change text layers go to the character tab (window>character) and edit.

Render your video

Double-Click on the "Render me" to open it in the timeline.
After that, go to Composition – Add to Render Queue and the Render Queue will open in the timeline window with the new Render Job added to it.

Make sure the Render Settings are set to Best Settings. Click on whatever is written right to the Output Module and a new window will open up. In that window, you can change the codec and file format. Also, if you have used sound in this project, make sure you activate Audio Output at the bottom of that new window. Else your video will be mute.
Last, click on whatever is written right to the "Output to" text and set the folder where you want your video to be saved in.
When you have set everything to your needs, click Render and wait for it to finish.
Depending on the project as well as your computer specs, this can take some time.
