

Soft Clean Logo

Hello and thanks for purchasing Soft Clean Logo. In this user guide we'll go over how to implement your logo & text into the template as well as change some FXs.

The Steps

To make things easy, just follow the tabs in order in which you see in the timeline (**Logo Placeholder**, **Text Placeholder**, and then **Final Render**)

Step 1: Logo Placeholder

Enter your logo into the project panel, and then into the **Logo Placeholder** timeline. Be sure to scale up, down, or position as needed. Next, go to your text layer and double click on the text layer to edit your text.

Step 2: Text Placeholder

Go to your Text Placeholder tab and alter your text by either double clicking on the text layer, double clicking on the text itself shown in the video preview panel, or choosing your Horizontal Type Tool and hovering it over your text. Make adjustments as needed.

Step 3: Final Render (The finishes)

After your logo and text are set, you can now go to Final Render to make some final adjustments if necessary. Under FX Controls you have effects as follows:

Note: If you want faster updates when making adjustments, set the resolution from "Full" to "Half" or "Third", then set it back once you're done.

- **Text Position** (changes the position of the text)
- **Flare Color** (changes the color of the flare coming from the side)

Misc.

If you have any questions or concerns, or need any special assistance, contact me in through email via www.videohive.net/ZeroLink If you guys have any recommendations on this project, drop a comment on the item page and I'll respond. Thank you guys and good luck!
