

*Follow this customization guide to understand basic editing steps of the template. For any question, feel free to contact me.*

## Customization

Customization is very simple.

1. Import your logo file by going to File > Import > File. Or double click on the project panel and choose the file.
2. Drag and drop it inside "YOUR LOGO" comp. Scale and position in the center of the composition. Select and delete the Envato logo.
3. Double click "Your tagline" text layer to edit it or delete the layer.

## Render final Video

After you're done with all edits, you need to create final output video.

1. In "RENDER ME" press "Ctrl+M" (Cmd+M) to add this comp to render queue.
2. Choose output format and output path. In most cases, optimal output file setting is QuickTime, h.264, Quality 80-100. You can also export lossless version then encode it inside Media Encoder. This will give you best quality possible.
3. While it renders, please take a second to rate my template, if you liked it, this will really help! - <http://videohive.net/downloads>
4. Thank you! ❤️

---

## Support & Customization

*If you don't have or don't know how to use After Effects, I am providing flexible customization services for all customers. Write to me with a short description of the required changes and I will give you a quote asap.*
