

## INSTAGRAM SALE STORIES

Thank you for choosing an Instagram sale stories template!

### Font

<https://www.fontsquirrel.com/fonts/montserrat>

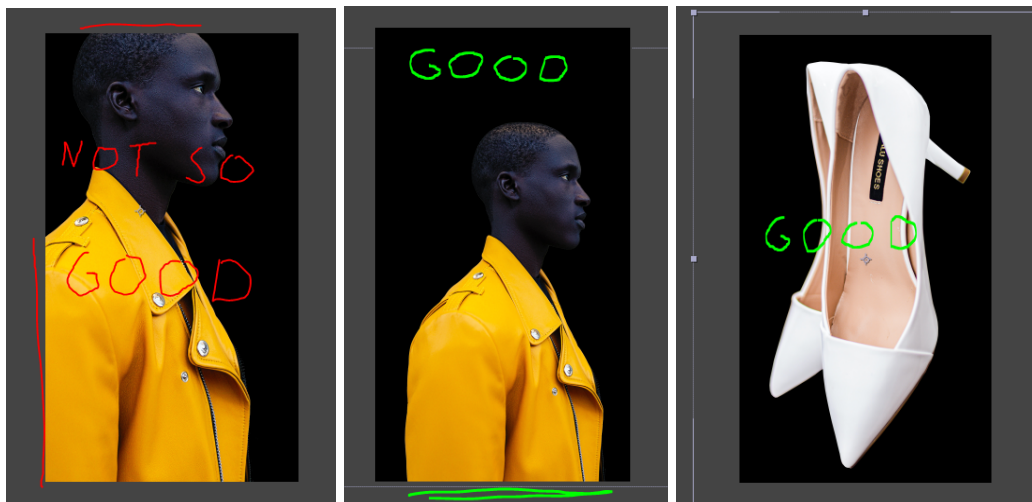

Download and install Montserrat font before opening the after effects project file.

### Structure

Inside the after effects file you will find Assets folder (do not touch it) and Tempalte\_1 to Tempalte\_9 folders. Inside Each Template folder there is the Edit folder and Template composition. In the edit Folder you can add your images and change text. In Template composition you will see final look of video and you can change some color settings

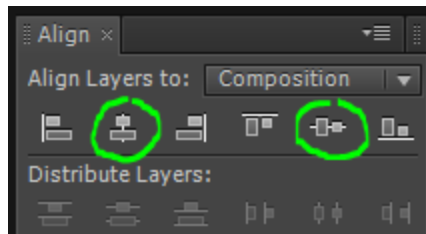

### Add Image

Open the Edit folder of the wanted template and just drag your images. For best results use transparent png images. Try to place them so that they connect only with the bottom of the frame. Or place a picture in the center like in the shoe image.

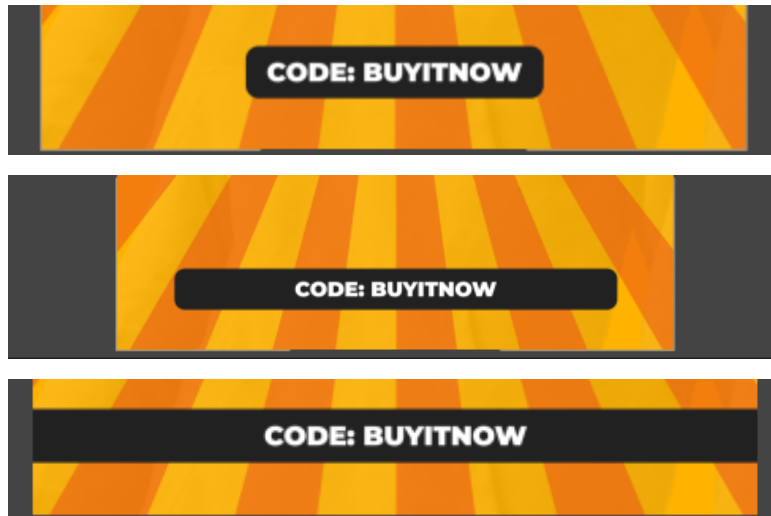

## Change text

Open the Edit folder of the wanted template and open all Text compositions, inside it change text to your needs. If you are changing font size, center text vertically and horizontally.

## Settings

Inside Template composition, select Settings layer. In it you can change the color of background, text and text holders. Basically all settings are for changing the colors of the template. In some composition you manually increase the text holder width.

That's it.

Hope you will like it :)
