

# Premiere Pro CC17 Project: Clean Slideshow

Short version: 1:20, 25 placeholders  
Long version: 2:25, 46 placeholders  
Full HD 1920x1080, 25 fps  
After Effects not required  
No Plug Ins required  
No music/video/photo included

## Introducing to project.

Open Clean Slideshow Project.

Here in project window you can see all folders with needed Sequences.

**Finals** – is main sequence that you have to render.

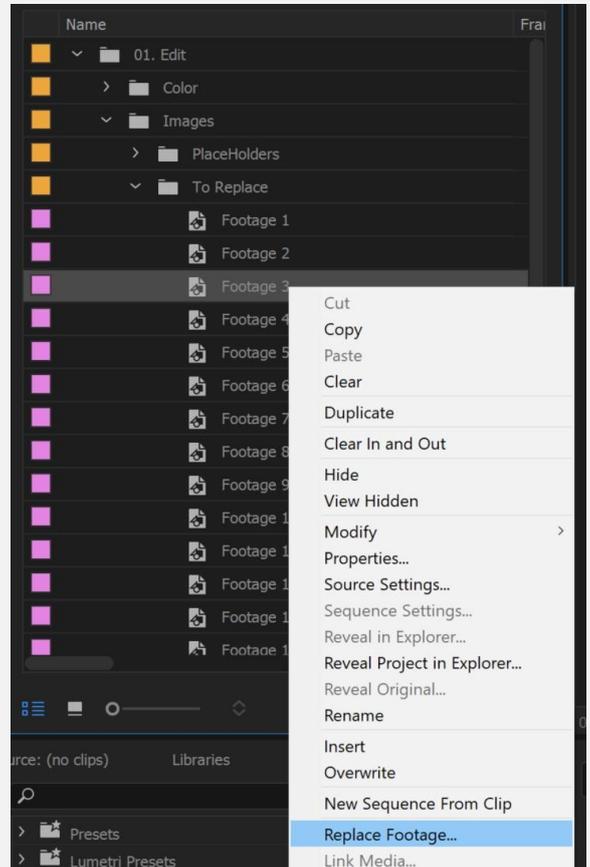

In **Edit** folder you can find subfolders with sequences that you can adjust.

There are all text layers in **Text** subfolder, just double click on each to change text.

In **Colors** subfolder you can see all color matte layers in which you can change color of transitions, text elements and BG color.

## Import footages.

You can import it in 2 ways. First: In Folder “To Replace” select needed number of solid (Replace 1,2,3..) – right click on it – Replace Footage – and select your photo or video. Or you can just import your photos in Project Manager (drag it here, or – right click-import), open needed sequence in **[PlaceHolders]** folder and drag it here. Place your footage in appropriate sequences (**Place 1,2,3...**) above Solids. In this sequences you can scale your Footage and change it position in effect controls like you want.

In project used font
