01. Unhide all objects in composition

Please turn off "Shy" button and you will see all layers inside composition.
Do it in each composition if you need to do serious changes.

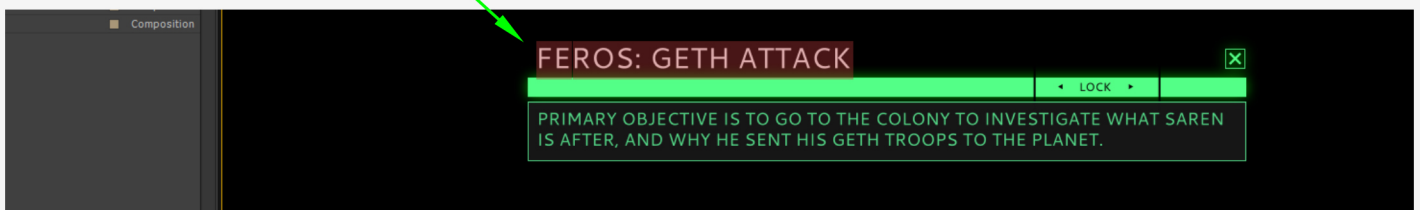

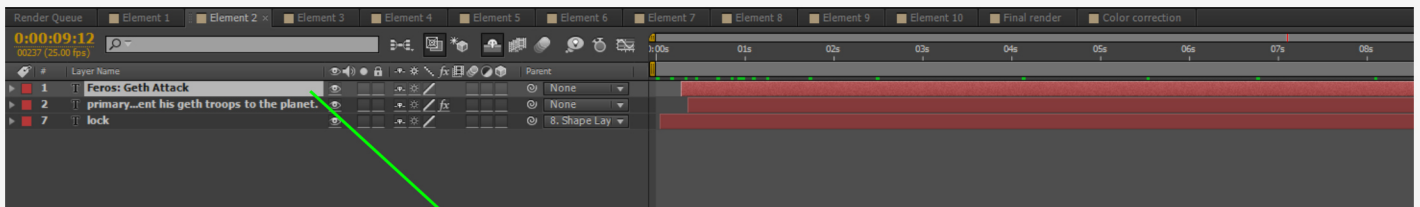

02. Color correction

- In composition "Color correction" select layer "Colors"
- Open effects panel and change colors as you need. It help to change colors in the entire project.
- Or press F3 button for open panel "Effect Controls".

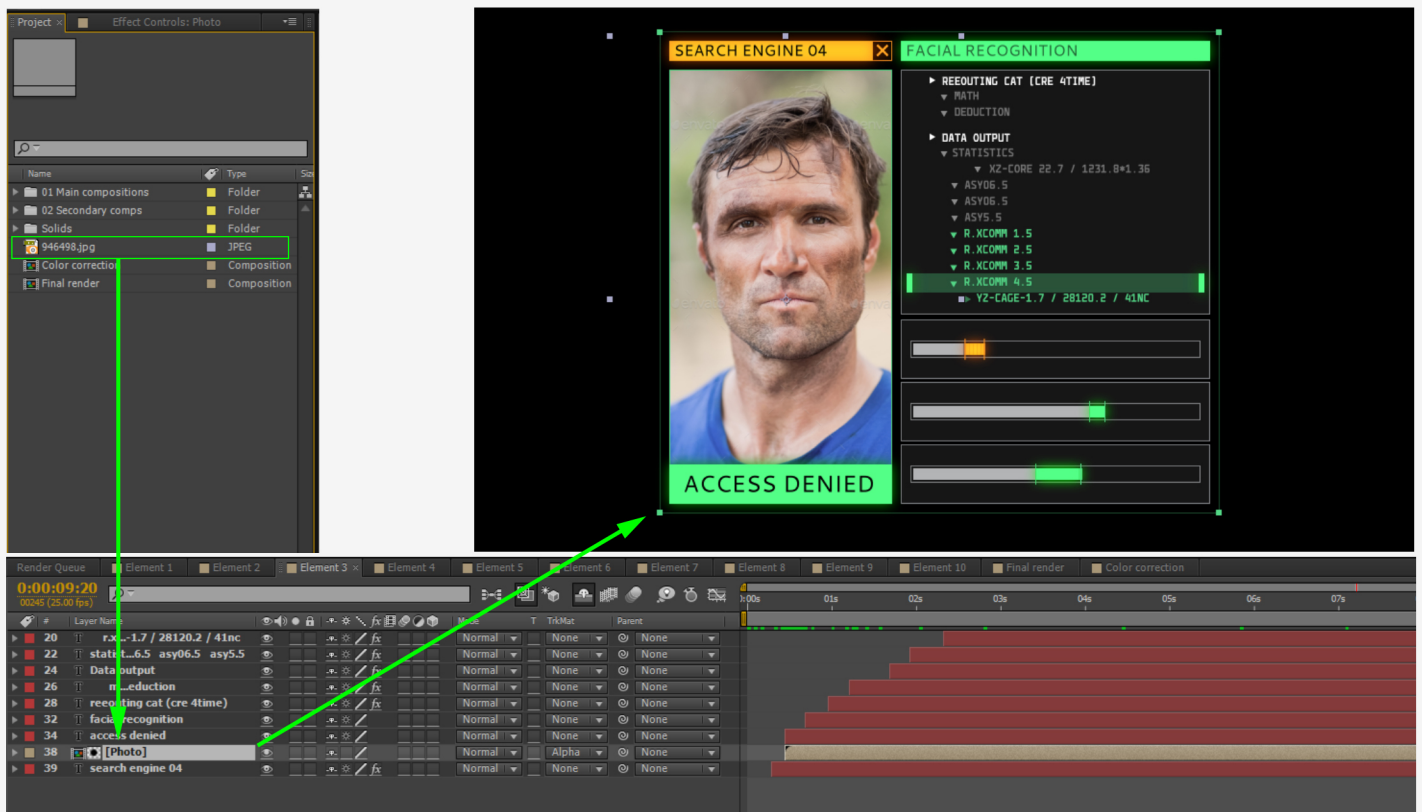

03. Change text

- Select the first text layer on the timeline.
- Double click it left mouse button. The text area will be activated and you can type your text.
- Use this method for changing next text layers.

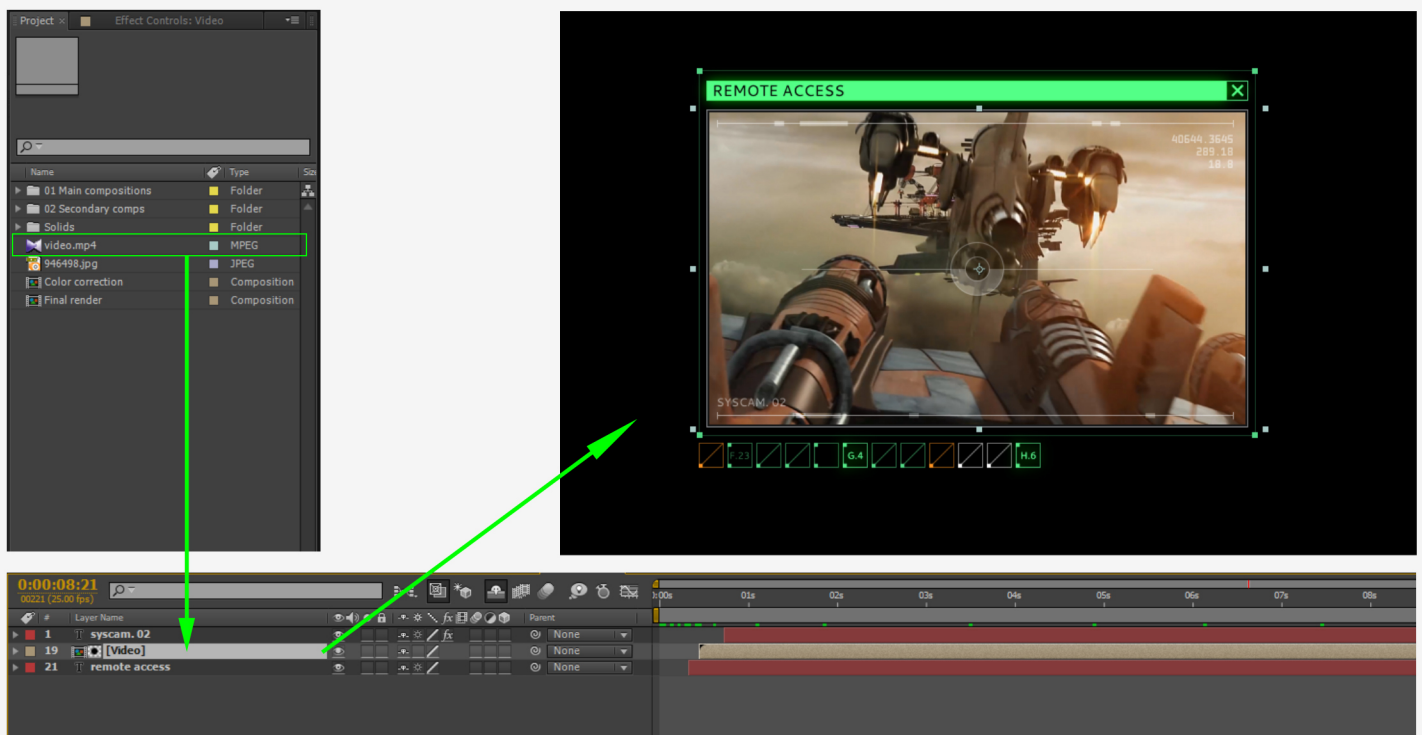

04. Photo replacement

- Select layer "Photo" on timeline.
- Pick your photo in "Project" panel.
- Press ALT/OPT button and move your photo on selected layer.

05. Video replacement

- Select layer "video" on timeline.
- Pick your video in "Project" panel.
- Press ALT/OPT button and move your video on selected layer.

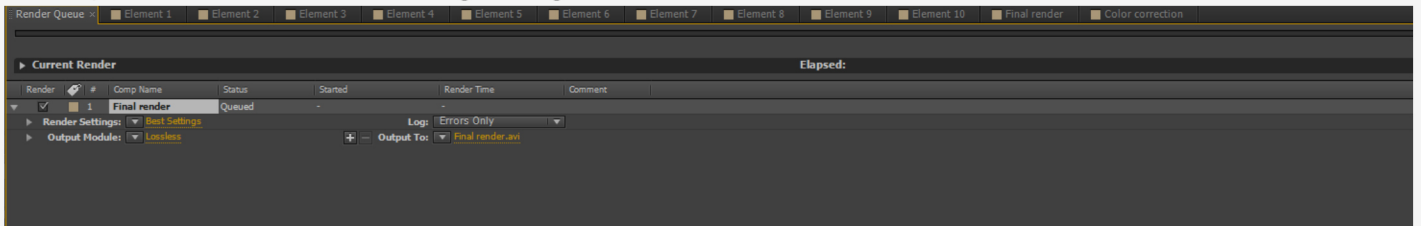

06. Render settings

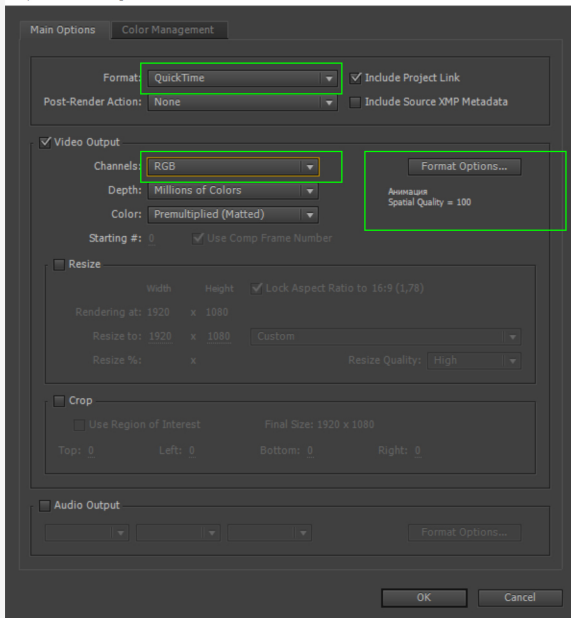

- Open composition "Final render".
- Go to Composition > Add to render queue.

- In Output module select the following settings.

Output Module Settings

- Press ok.
- In Render queue panel press Render button.
- You'll get video file. With this file you can work in after effects or in any video edition software.
