Help file

Hi, thanks for purchasing the project!
This is a small lesson for you to use this project correctly. Let's get started!

First you need to install the necessary files. To install it, you need to move the folder (Instagram Stories) to the next folder:

If you do not have Apple Motion Installed and only FCPx
Right click on the application icon and select "show package contents" then follow the path below and place the downloaded product in the correct folder.

Applications/Final Cut Pro/Contents/Plugins/MediaProviders/Motion
Effect.fxp/Contents/Resources/Template /Generator

If you have Apple Motion Installed in your Mac.
Please go to your home folder and place the product downloaded in the generator folder.
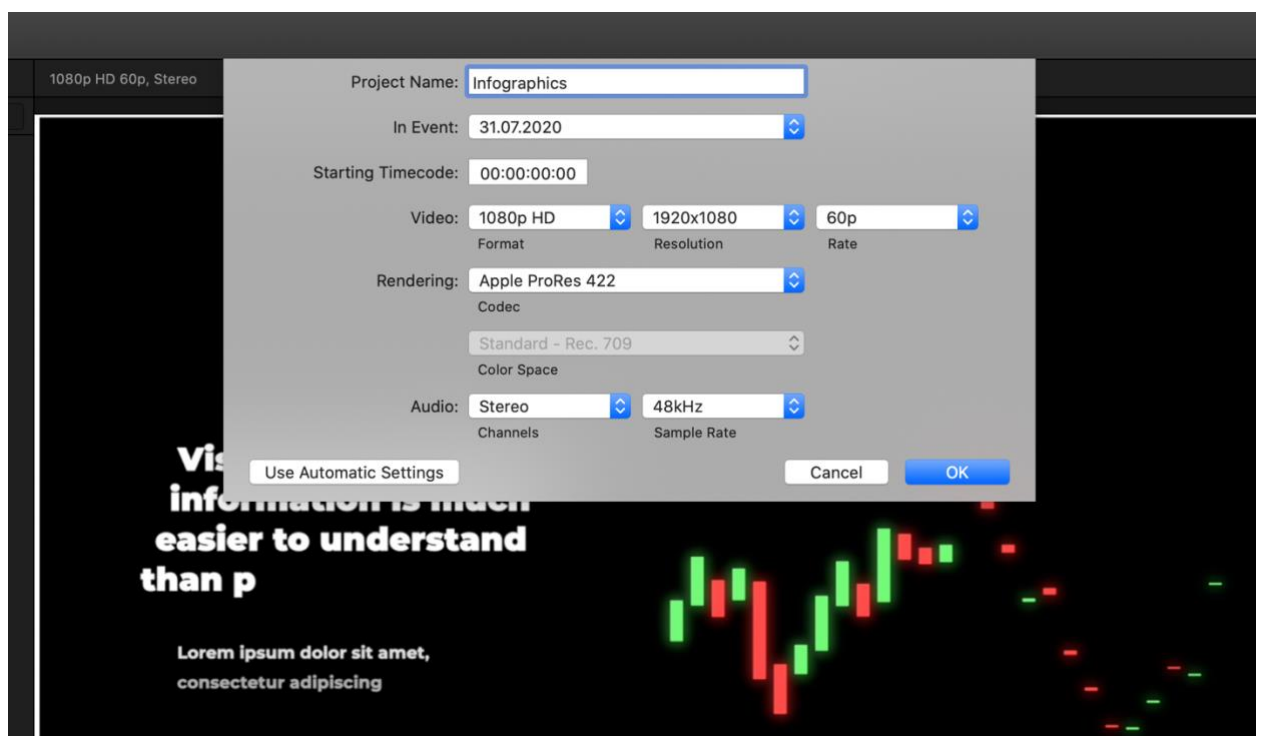

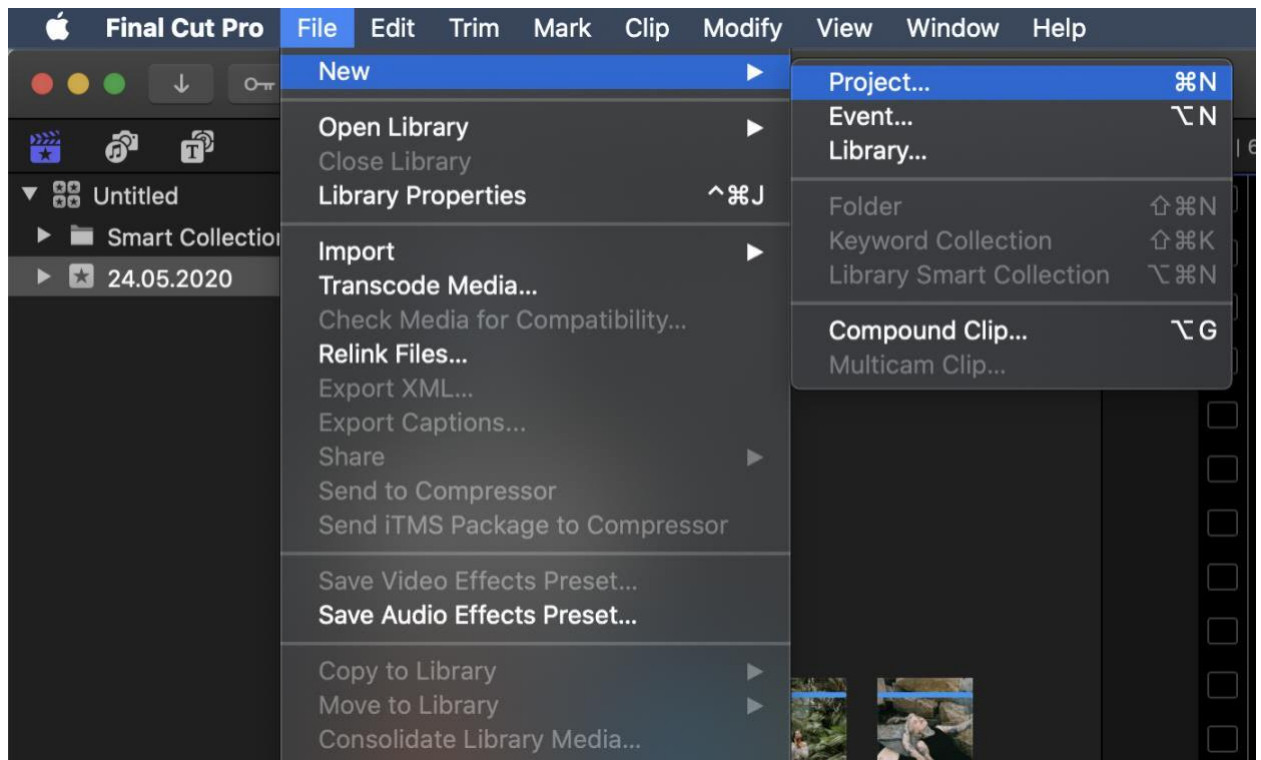

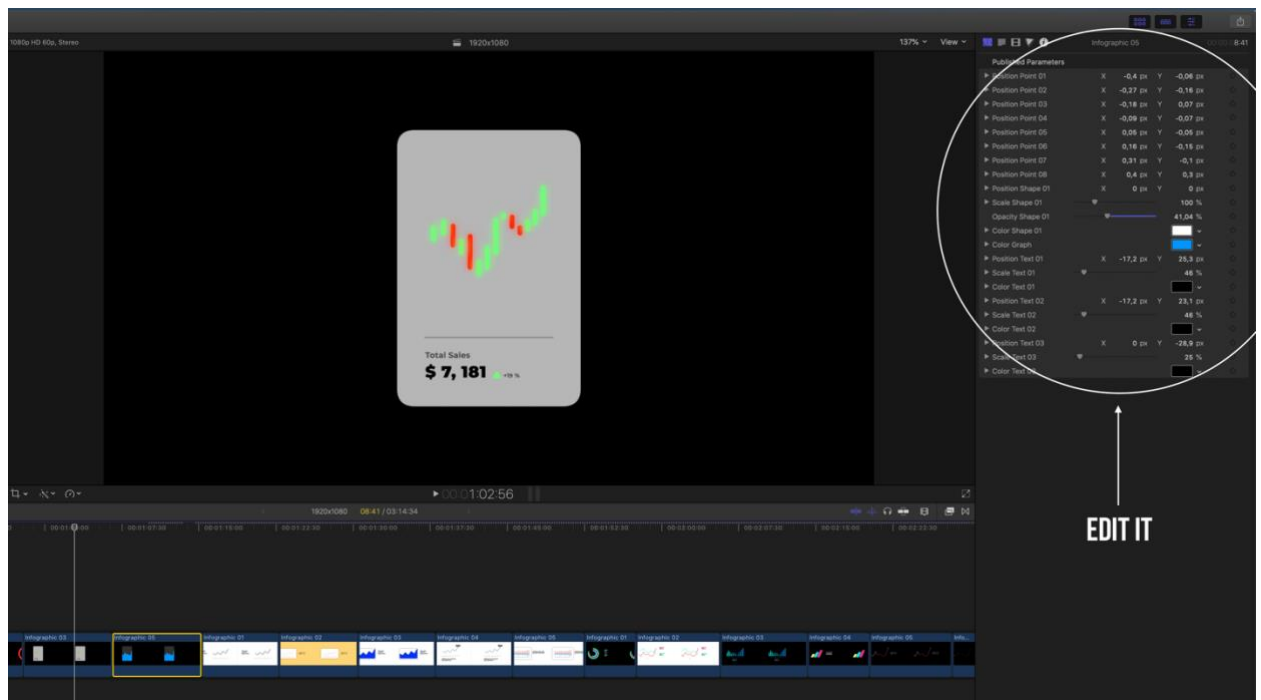

Movies/Motion templates/generator

Fine!

Now open the final cut.
Create a new project as shown in the pictures.

Then open the category you need and drag it to the time line.

In order to edit, click on the title, and change in the upper right window.

EDIT IT

Thanks for downloading my project, I hope you enjoy it!
I would be happy if you subscribe to me on videohive, and also rate my project :)
