15 Vintage Titles Pack

Follow this customization guide to understand the basic editing steps of the template. For any question, feel free to contact me, I will be glad to assist you.

Assets

Download and install required fonts, restart AE. Use AE version CS 5.5 and higher to open the project file. Ignore the error message that pops out when the project is opened with newer versions of AE.

Download and install these free fonts:
https://www.dafont.com/swistblnk-monthoers.font

Project Navigation / Overview

Before opening the project file, make sure to not move any files inside the folders, this will cause a "missing file" error.

You'd probable want to import these titles into your other project. Do it by going to File > Import > File and navigate to .aep of this template.
Use the project panel as a navigation tool for placeholders and titles. Inside the "TITLES" folder you can find all titles.
In the "ALL TITLES" comp you can preview them altogether.
In "ALL TRANSITIONS" are all transitions.

Customization

Edit Title Text

Double click on a text layer and type your new text. Use the Character window to edit settings like text color, size, font.

Edit Shape Colors

Shape colors can be edited from the "Shape Colors" layer. Select it and edit the "Shape Colors" effect in the effects panel.

Edit Shape Positions

Reveal all layers by clicking on the shy layers icon
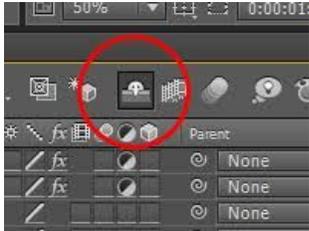

Select and drag any elements with the Selection Tool (V)

Using Transitions

Transitions should be inserted above a layer that you want to reveal. Set that layers TrackMatt to Luma Matte
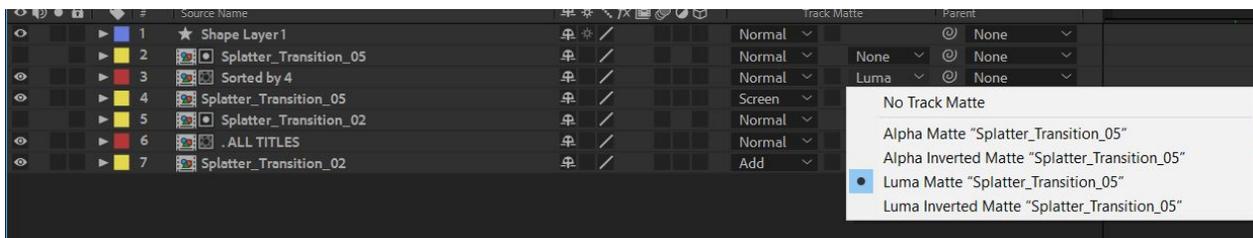

You can see how it's done in "Videhive Preview" comp and some others.

Render your animation

After you're done with all edits, you need to create a final output video. Follow these steps.

1. From any final comp drag work area to the start and end of the comp (or desired final output duration). You can use shortcuts "B" and "N" for this process.
2. Press Ctrl+M (Cmnd+M) to add this comp to render queue.
3. Choose the output format and output path. In most cases, the optimal output file setting is QuickTime, h.264, Quality 80-100. You can also export a lossless version then encode it inside Media Encoder. This will give you the best quality possible.
4. While it renders, please take a second to rate my template, if you liked it, this will really help! - http://videohive.net/downloads
5. Thank you!

Support & Customization

f you don't have or don't know how to use After Effects, I am providing flexible customization services for all customers. Write to me with a short description of the required changes and I will give you a quote asap.
