

Hello! Thanks for buying this template!

It's really easy to customize:

Open "Navigation" composition and choose the item you need to customize for your project.
Then select it in the template structure in the Color folder.

Open the composition that you choose and change the parameters in the Effect Controls panel of the "Control" layer. Don't touch any other layers here.

Then copy this composition from "Navigation" to your project in "Final Comp"

Thats all.

Hope you like it,

Best regards
