Hello! Thanks for buying this template! It's really easy to customize:
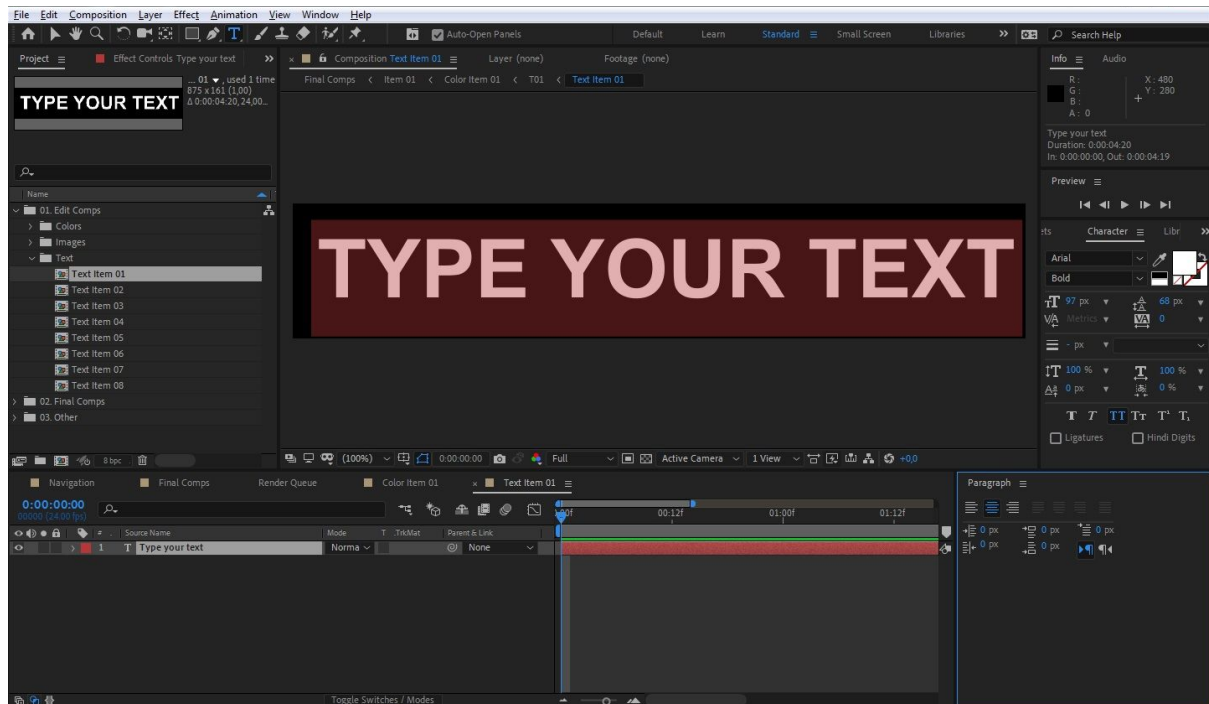

To change colors and effects of animations open "Color" folder. Choose composition that you need to customize and open it by double-click

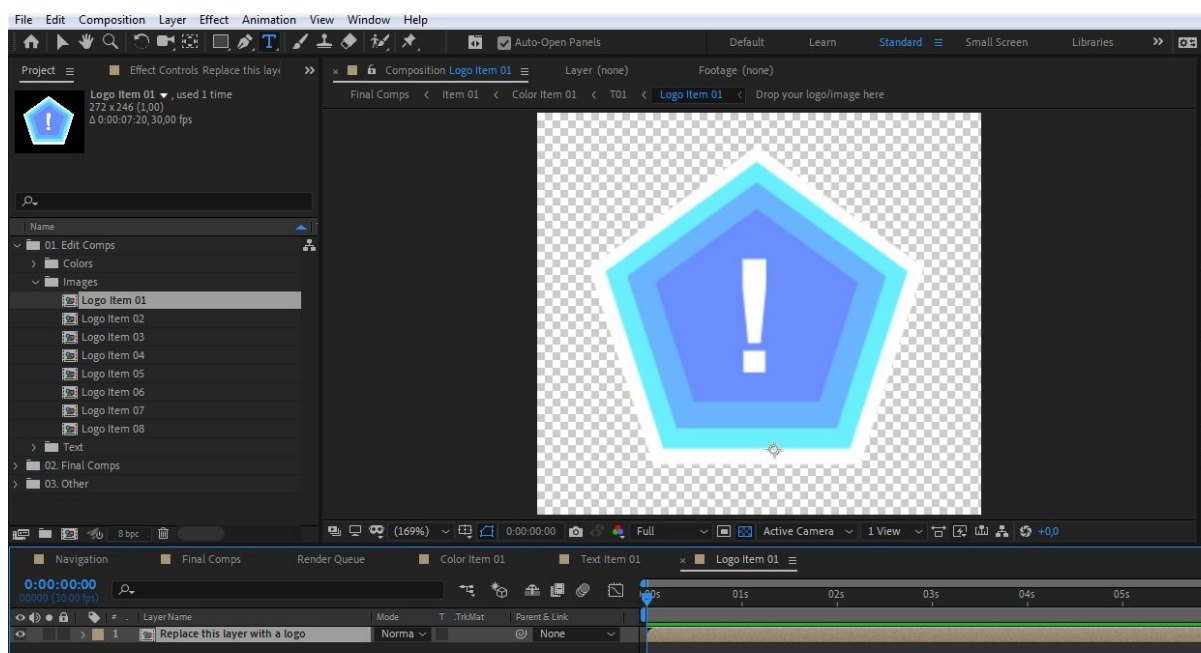

.
To change colors use Effect Controls panel of "Controller" layer.

To source your text in titles open "Text" folder. Select the text composition to which you want to change the text, and open it by double-clicking. Then double-click on the text layer inside the composition and change the text.

To drop your logos or images in some titles open "Images" folder. Select the composition into which you want to insert your brand logo or image, and open it by double-clicking. Inside, you need to replace the layer or composition with the your image or logo.

To adjust the length of the animation, select the item you need in the composition "Final Comps" on to the timeline. You can pull the edge of the layer to adjust the length, while the animation of the input and output will not change.

That's all. Hope you like it and again - thanks for buying. Please do not forget to rate if you like!
