- **12 Placeholders**
- **Universalized Expressions**
- **Full HD 1920x1080**
- **After Effects CC15 and above**
- **No Plugins Required**
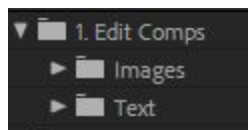

How to use it:

In the opened project you will see Final Comp. This is the main compositions, where you can move scenes or remove them:

Please note that a composition need some time to transition, because of that, scenes should overlap like on the pic below:

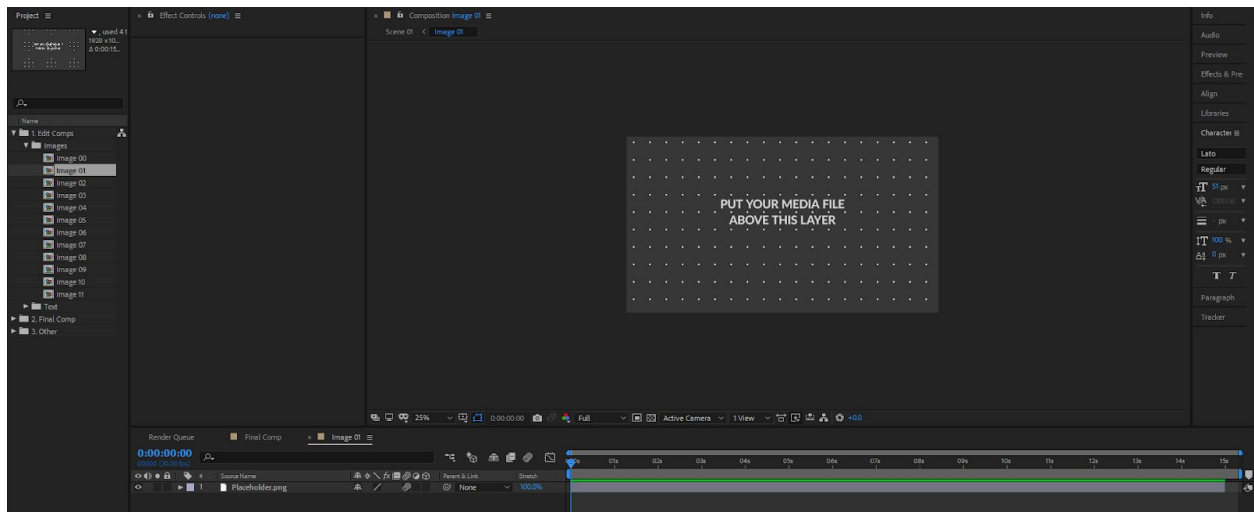

There are **Edit Comps** folder, this is where you should put media files, logo and change text.
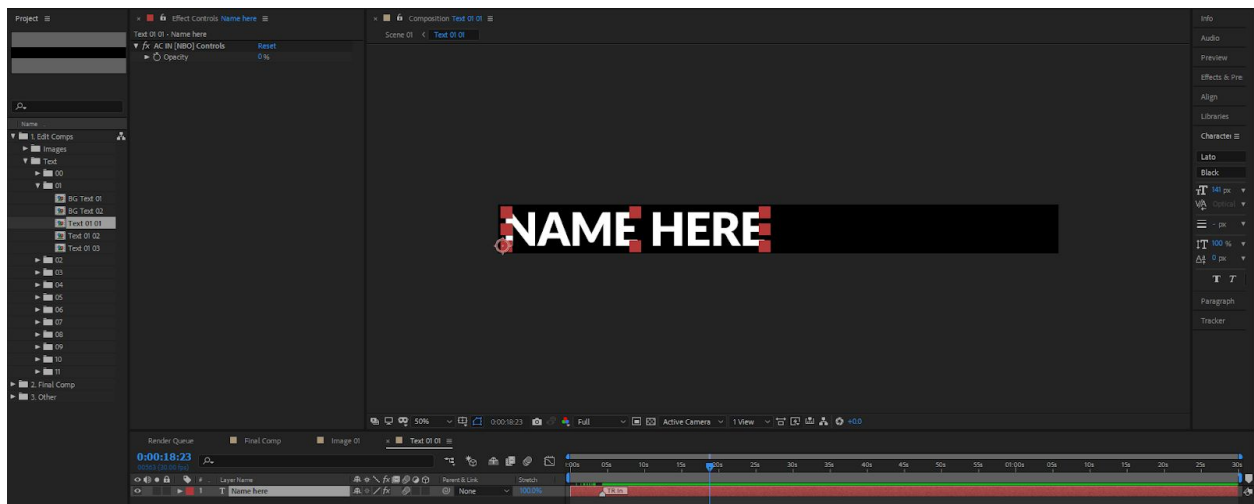

Let's put some Photos. For example, we will add images to Scene 01.
So, open **Images - Image 01**. Just drag and drop your photo here above the
placeholder file.

Change text in Text folder. There are two background text placeholders for quotes,
Text 01 - placeholder for name or title. **Text 02** - for date or subtitle, **Text 03 -** for
description. Open **Text - 01 - Text 01 01**, double click on the text layer and type your
text.

There is a **CONTROLS** layer In **Final Comp** composition, which controls colors, effects and name background scale. Select **CONTROLS** layer and change colors in Effect Controls.

Once done with all parts, open **Final Comp** composition and hit render.

Enjoy!
