## HOW TO REPLACE TEXTS

You can change all the texts, replacing them with your own. The font is not included, but a download link is provided in the help text file. You can find the text compositions inside the “01.Edit Comps>Text” bin (see figure 1).

Just double click the text comp to go there and replace, also by double clicking the layer with the text provided (see figure 2). Add your own, but be aware of the safe margins.

## HOW TO CHANGE COLORS

You can change the color of the text, by going to the “Color” comp (see figure 1). Double click on the comp inside the “01. Edit comps>Color” bin. There, select the “color control” in the composition (above the Build Clip), and inside the Effects Control (above left in your AE interface) you can click and change the font color (check description of what you’re changing to see results). The one pre-selected is a mere suggestion.

# HOW TO EXPORT VIDEO

There are 2 different options you can choose from to export your video: a Full HD render composition (1920x1080p) and a 720p comp. Simply choose the one you need. Go to comp (double click on it inside the “02. Final Comp” bin that’s shown on the right) and hit ctrl+M (Cmd+M for Mac). Or go to File>Export>Adobe Media Encoder Queue (this option is recommended) and choose output folder.
