Hello! Thanks for purchasing!

It's really easy to customize:
Open "Final Comp" composition and choose the item you need to customize for your project.
Then select it in the template structure in the Color folder.

Open the composition that you choose and change the parameters in the Effect Controls
panel of the "Customizer" layer. Don't touch any other layers here.

If the project contains compositions with the ability to enter text, they are located in the "Text" folder. Text must be entered in the text layer inside the composition.

If the project contains compositions with the ability to add your logos or images, they are located in the "Images" folder. There you can add your image simply by placing it inside the composition or replace it with the layer there.

after that you can copy the edited composition to your work from the "Final Comp"

Thats all.
Hope you like it,
Best regards
