Hello! Thanks for buying this template!

It's really easy to use and customize. Here is the simplest example:
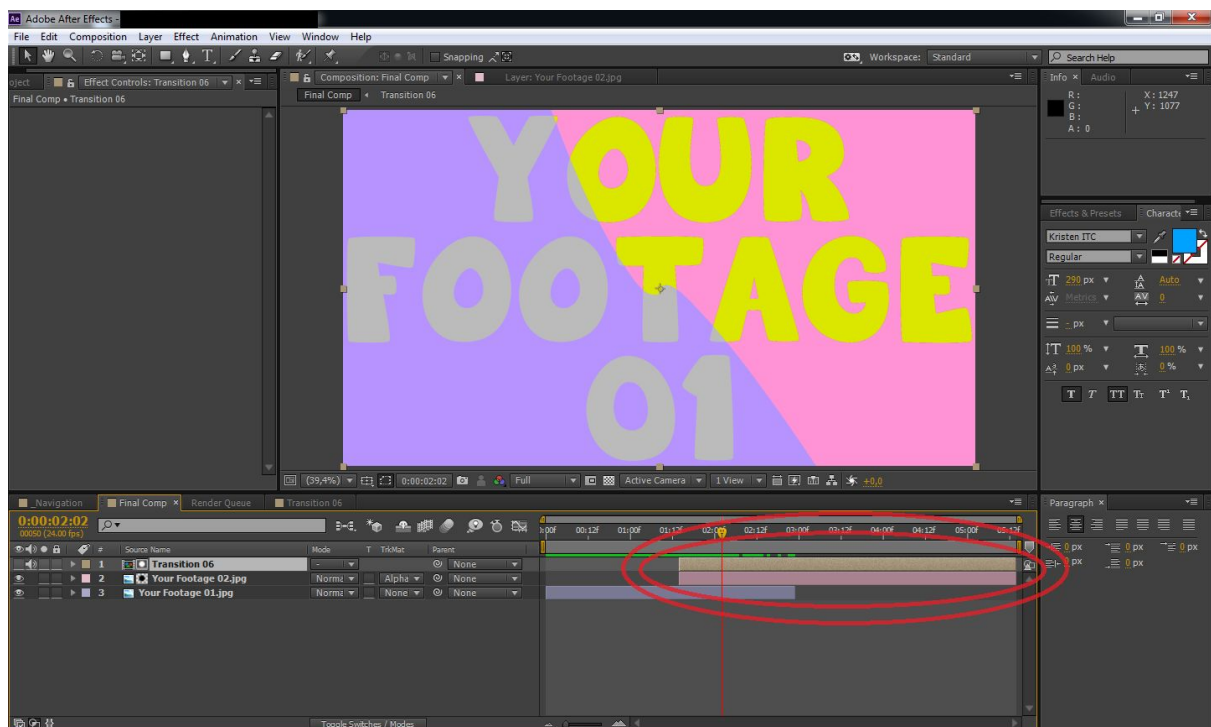

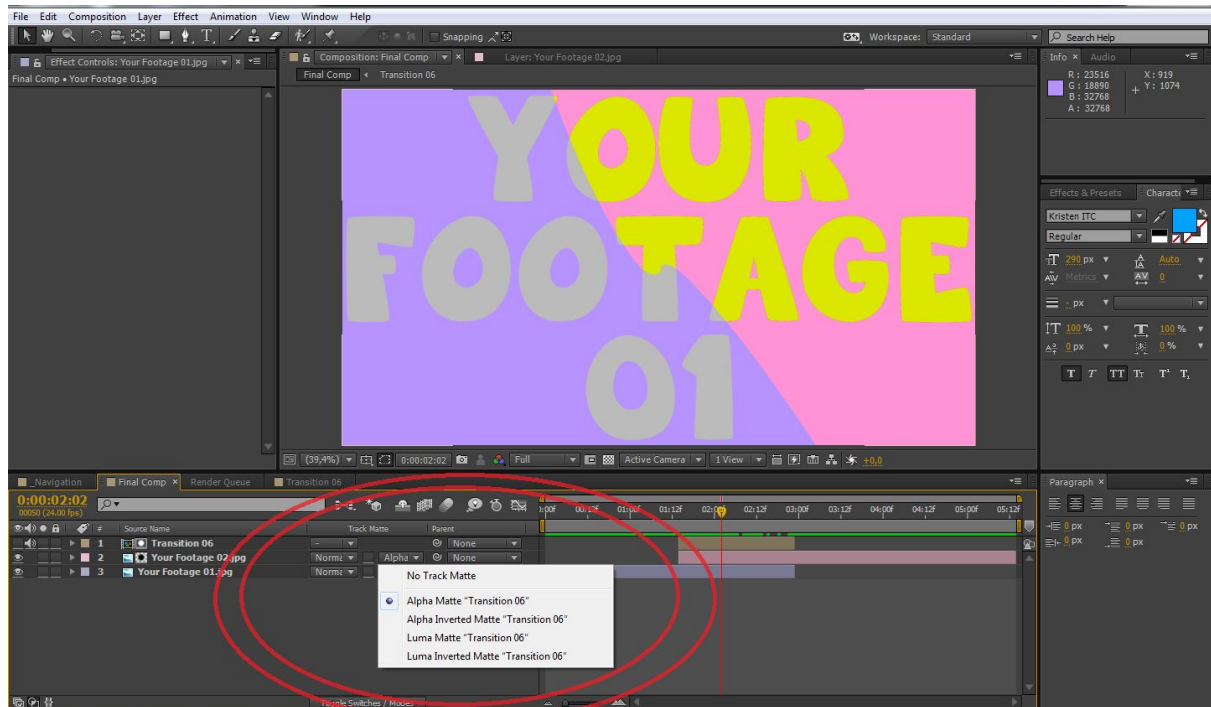

1. Open "Navigation" comp Copy element (transition) to your composition
2. Inside each element there is a controller that allows you:
    - to change color
    - to turn on/off glow effect
    - to change glow color
    - to change glow radius
3. Select the transition you like and the footage that will be used. I will show the example of these two:

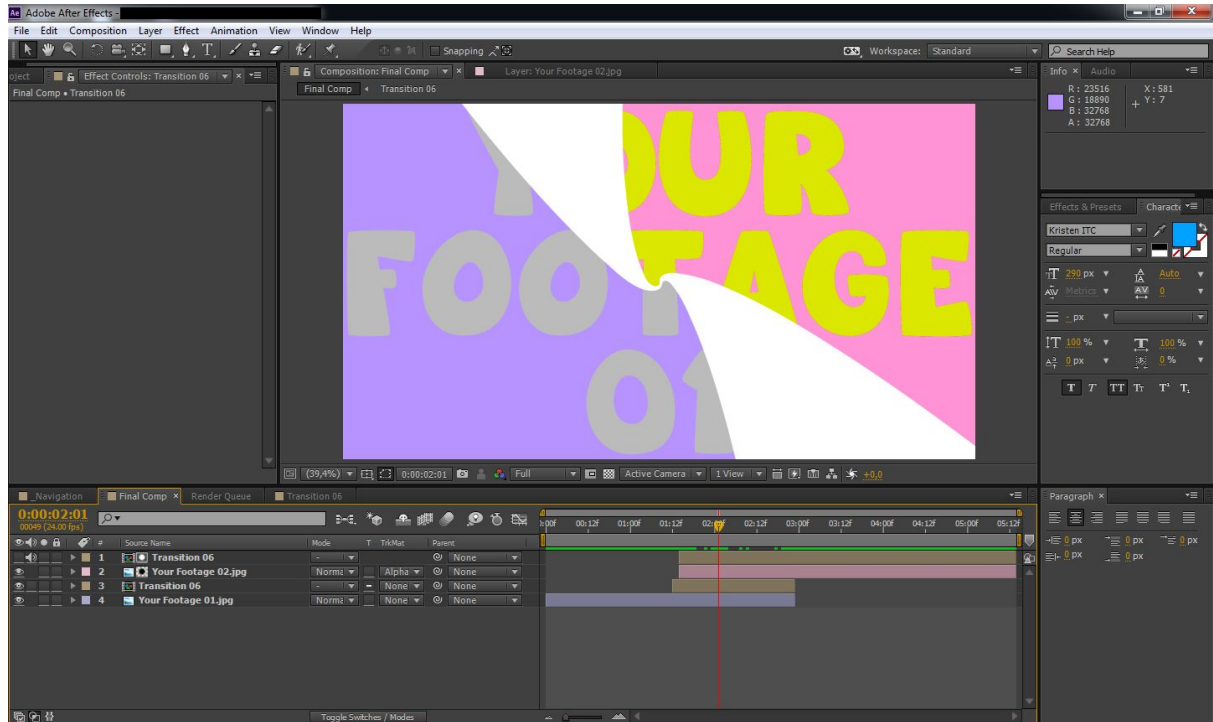

4. Copy element (transition) to your composition.
5. Place it on the timeline above your footnotes in the place where the transition will occur.

6. Now you need to show your second footage with alpha matte and then pull the end of the transition on the timeline so that it fully coincides with the length of the footage that it opens:

You can also make a spectacular looking stroke. To do this, after the fifth step duplicate the transition and place it between the footages on the timeline a few frames earlier:

Thats all.
Hope you like it,
Best regards.
