

Need Premiere Pro CC 2019 or later. Click on Window - click on Essential Graphics. Essential Graphics panel will appear. Click on the small icon in the tin the lower right corner of the Essential Graphics panel - says "Install Motion Graphics Template"

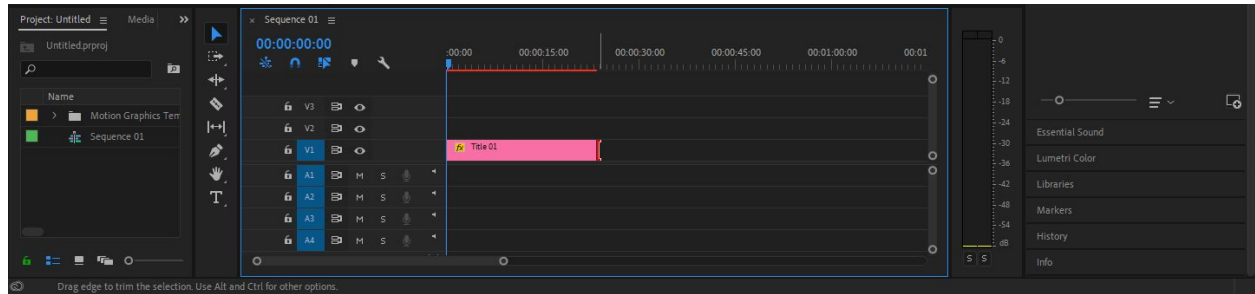

Locate .MOGRT file and click open. File is now installed in your Premiere Essentials Graphics panel. Use the search tab in the Essentials Graphics panel to find it.

Drag your template file to your sequence on a timeline and drop. Clicking once on the title on the timeline you open the controllers in Essentials Graphics panel with which you can change the color of the animation and text, font, change the text and use other effects specified there.

If you need to increase or decrease the title time, you just need to pull the right edge of the layer. Right to increase time, left to decrease. In this case, the input and output animation will not accelerate or slow down, only the static part of the title will change.

That's all. Hope you like it, Best regards!
