Hello! Thanks for buying this template! It's really easy to customize:

To change colors and effects of animations open "Color" folder.
To source your text in titles open "Text" folder.
To drop your logos or images in some titles open "Images" folder.

To adjust the length of the title, select the title you need in the composition "Navigation" or in the folder and copy it to the timeline. You can pull the edge of the layer to adjust the length, while the animation of the input and output will not change.

That's all. Hope you like it and again - thanks for buying. Please do not forget to rate if you like!
