Gold Logo

Hello and thank you for purchasing Gold Logo. In this tutorial, we'll go over how to implement your logo, change text, and make final adjustments to this logo.

Step 1: Changing Text

To change your text, go to the composition tab "**1. Text Placeholder**" in the timeline. Double click on the text layers to highlight and edit the text.

Do not delete and create your own! If you need more text, duplicate them by selecting them and pressing ctl + D (cmd + D on mac)

Step 2: Adding Logo

To add your logo, either double click in the project panel area to bring up Import files, then find and select your logo OR find your logo on your computer and drag & drop it into the project panel. Once your logo is added into the project panel, drag and drop it into the tab that says "**2. Logo Placeholder**". Be sure to drop it under "**Change logo Under**". You can either delete or hide the Reference Logo.

Step 3: Final Touches

Once you've changed your text and added your logo, go to "**3. Final Render**" to make final adjustments. When you select the "**Control Layer**", you'll see 7 fx, 6 in which can be controlled. To better see these effects in action, drag your timeline indicator to the marker that says "*Set time indicator here for logo & text editing*". These effects are pretty self explanitory:

Logo & Text Position Size: Controls logo and text final position and size
Logo Details: Adds additional etches to your logo for more details

Flare Color: Changes color of flare

Once you're done, you can render your project to your preferred settings.

Note: _This project supports 60 fps. To do this, go to "Composition" at the top left of After Effects >> Composition Settings >> change Frame rate from 30 to 60, or how ever many you like._

Good luck and enjoy!
