Hello! Thanks for purchasing!

This is a ready-to-use slideshow.
To customize it, you need to know the following points
For completely correct work with the template you need to insert your footages. To do this, open the "Edit Comps" folder and the "Image" folder in it. Select the composition in which you want to add footage:

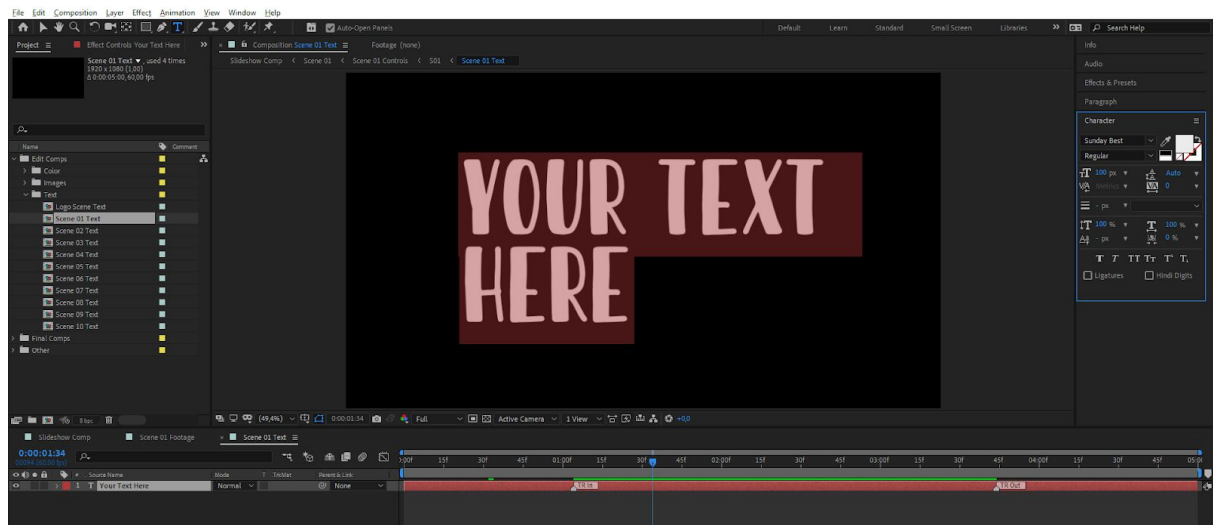

to make everything look perfect, you need to trim the area of the footage using Pen Tool or RotoBrush Tool.

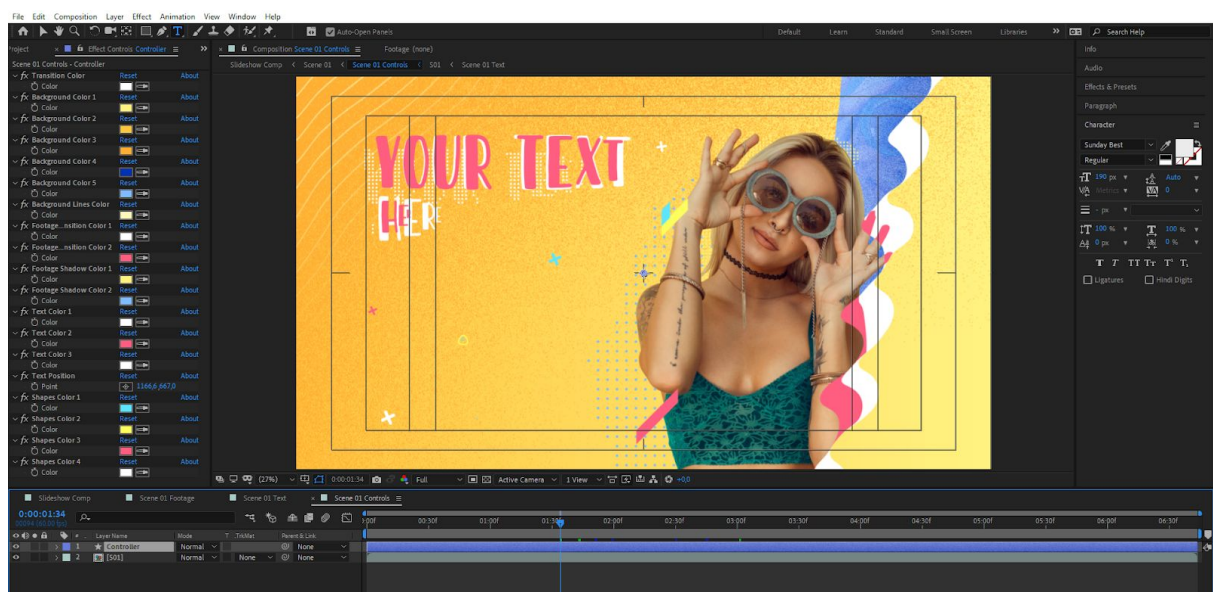

The area for the optimal location of the resulting image is marked with guides inside the composition.

There is no need to do this in the Logo Scene, there you just need to add png. image of your logo.

If you need to source your text in the scene you need to open the "Edit Comps" folder and the "Text" folder in it. Open the composition that you choose and change the text by double-clicking text layer. Change font, text size and other parameters in the text panels of After Effects.

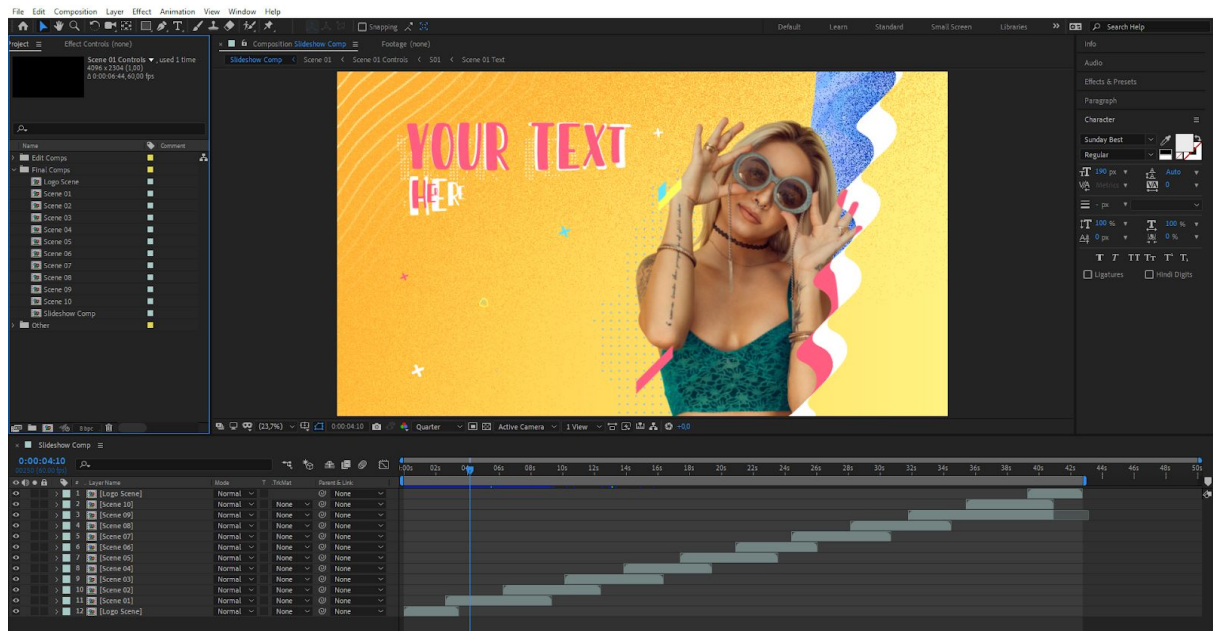

If you need to change colors or text position in the scene you need to open the "Edit Comps" folder and the "Color" folder in it. Open the composition that you choose and change the parameters in the Effect Controls panel of the "Controller" layer. Don't touch any other layers here.

If the project contains compositions with the ability to add your logos or images, they are located in the "Images" folder. There you can add your image simply by placing it inside the composition or replace it with the layer there.

Once you have configured all the scenes, you can set them in the order you need on the timeline.

Thats all.
Hope you like it,
Best regards.
