Website Presentation Pack

Follow this customization guide to understand the basic editing steps of the template. For any question, feel free to contact me, I will be glad to assist you.

Assets

Download and install required fonts, restart AE. Use AE version CS 5.5 and higher to open the project file. Ignore the error message that pops out when the project is opened with newer versions of AE.

Download and install these free fonts:
https://fonts.google.com/specimen/Raleway
https://fonts.google.com/specimen/Playfair+Display

Project Navigation / Overview

Before opening the project file, make sure to not move any files inside the folders, this will cause a "missing file" error.

Use the project panel as a navigation tool for placeholders and titles. Inside each "SCENE" folder you can find the scene itself and placeholder compositions. This is where your media should be inserted.
Open the "MAIN COMP" composition to see sequence animation from preview. If you like to use it, then you will need to make all edits there. If you want to create your own new animation, then use pre-made "Scene Library" composition to easily browse all available scenes.

Customization

Import and insert your media

1. Import your files (screenshots, website pages, videos) by going to File > Import > File. Or double click on the project panel.
2. Drag your media inside opened "Placeholder" comps and place it below the mask layer. Scale your footage to fit composition size. Delete "Delete_me" after you inserted your footage or remove it from all comps by deleting it from the project panel.
3. Drop your logo into "Logo Horizontal" and "Logo Vertical" comps.
4. The audio file should be imported inside "MAIN COMP" or any comp that will be for final rendering.

Edit text layers

All text layers are inside scenes. To edit a text layer just double click it and type new text. Color editing of the text is done via the character window.

All text animations are driven by expression, so there are only 2 keyframes to edit. You can also change animation properties that are driven fully by expressions. In Effects Controls window while your text layer is selected edit properties of start animation, delay, and others available for specific text layer.
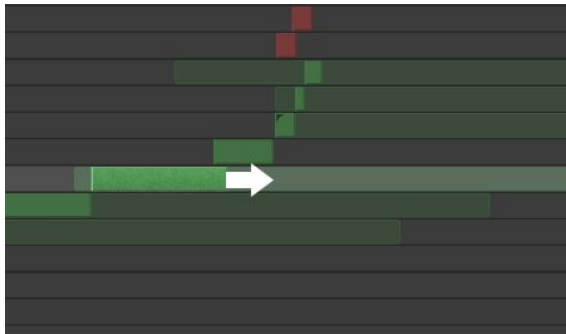

Edit Colors

All main colors can be controlled from the "MAIN COMP" Color Controls layer.

Edit Timings / Scene Sequence / Durations

Each "SCENE" has unused seconds of animation, you can see full animation of each scene inside the scene or in "SCENE LIBRARY" comp. By using these extra durations you can create your own unique sequences or add some time changes is "MAIN COMP".

To add some more time to a specific "SCENE", you need to drag out its endpoint.

The transparent green part is the unused comp time.

After you have dragged the out point, select all layers from above and move them to fit with the new scene duration that you have edited. If "MAIN COMP" durations are too short to fit all animations with longer durations, change its duration by going into Composition > Composition Settings, or use shortcut Ctrl + K (Cmnd + K for Mac users).

Duplicate Scenes

1. Import the same project file inside the template. File > Import > File.
2. Find the required scene and insert it inside "The MAIN COMP". Use new placeholders from the imported project file.

Render your animation

After you're done with all edits, you need to create a final output video. Follow these steps.

1. From the "MAIN COMP" drag work area to the start and end of the comp (or desired final output duration). You can use shortcuts "B" and "N" for this process.
2. Press Ctrl+M (Cmnd+M) to add this comp to render queue.
3. Choose the output format and output path. In most cases, the optimal output file setting is QuickTime, h.264, Quality 80-100. You can also export a lossless version then encode it inside Media Encoder. This will give you the best quality possible.
4. While it renders, please take a second to rate my template, if you liked it, this will really help! - http://videohive.net/downloads
5. Thank you!

Support & Customization

f you don't have or don't know how to use After Effects, I am providing flexible customization services for all customers. Write to me with a short description of the required changes and I will give you a quote asap.
